It has been assumed that basic service procedures inherent to the industry, and more specifically YAMAHA Products, are already known and understood by the users, and have therefore not been restated.

WARNING: Failure to follow appropriate service and safety procedures when servicing this product may result in personal injury, destruction of expensive components, and failure of the product to perform as specified. For these reasons, we advise all YAMAHA product owners that any service required should be performed by an authorized YAMAHA Retailer or the appointed service representative.

IMPORTANT: The presentation or sale of this manual to any individual or firm does not constitute authorization, certification or recognition of any applicable technical capabilities, or establish a principle-agent relationship of any form.

The data provided is believed to be accurate and applicable to the unit(s) indicated on the cover. The research, engineering, and service departments of YAMAHA are continually striving to improve YAMAHA products. Modifications are, therefore, inevitable and specifications are subject to change without notice or obligation to retrofit. Should any discrepancy appear to exist, please contact the distributor's Service Division.

WARNING: Static discharges can destroy expensive components. Discharge any static electricity your body may have accumulated by grounding yourself to the ground buss in the unit (heavy gauge black wires connect to this buss).

IMPORTANT: Turn the unit OFF during disassembly and part replacement. Recheck all work before you apply power to the unit.

■ TO SERVICE PERSONNEL

1. Critical Components Information.
Components having special characteristics are marked Δ and must be replaced with parts having specifications equal to those originally installed.
2. Leakage Current Measurement (For 120V Models Only).
When service has been completed, it is imperative to verify that all exposed conductive surfaces are properly insulated from supply circuits.
 - Meter impedance should be equivalent to 1500 ohm shunted by 0.15 μ F.
 - Leakage current must not exceed 0.5mA.
 - Be sure to test for leakage with the AC plug in both polarities.

WARNING: CHEMICAL CONTENT NOTICE!

The solder used in the production of this product contains LEAD. In addition, other electrical/electronic and/or plastic (where applicable) components may also contain traces of chemicals found by the California Health and Welfare Agency (and possibly other entities) to cause cancer and/or birth defects or other reproductive harm.

DO NOT PLACE SOLDER, ELECTRICAL/ELECTRONIC OR PLASTIC COMPONENTS IN YOUR MOUTH FOR ANY REASON WHATSOEVER!

Avoid prolonged, unprotected contact between solder and your skin! When soldering, do not inhale solder fumes or expose eyes to solder/flux vapor!

If you come in contact with solder or components located inside the enclosure of this product, wash your hands before handling food.

■ DISASSEMBLY PROCEDURES (Remove parts in the order as numbered.)

1. Removal of Top Cover

Remove 4 screws (1) and 4 screws (2) in Fig. 1.

2. Removal of Front Panel

- a. Remove 7 knobs.
- b. Remove 6 screws (3) in Fig. 1.

3. Removal of Bottom Cover

Remove 6 screws (4) in Fig. 1.

Precautions for Replacement of input Selector Switch
Make sure to perform initial setting of the input selector switch after its replacement.

● **How to perform initial setting**
Position the selector switch at the mid-point between the CD position and TUNER position and turn ON the POWER switch. Then the SELECTOR switch turns automatically till it stops at the "CD" position finally.

Fig. 1

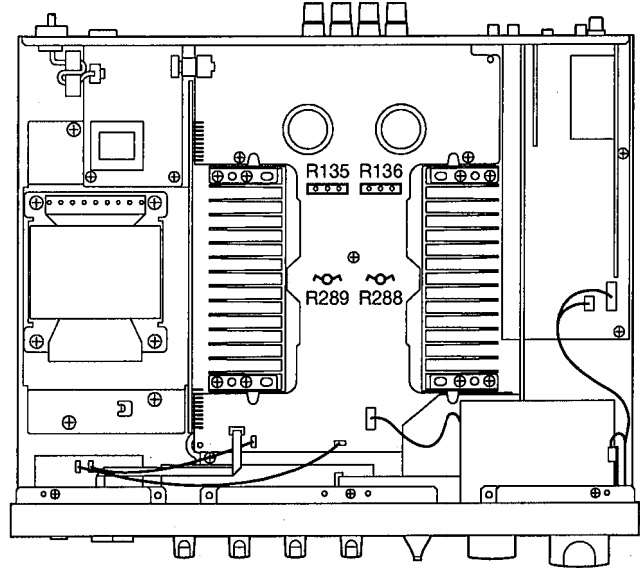

AMP ADJUSTMENTS

Confirmation of idling current.

After Power is turned on.

Confirm that the voltages across R135 (L ch), R136 (R ch) are between 0.15 ~ 4mV.

If they exceed 4.1mV, open (cut off) R289 (L ch) and R288 (R ch), and reconfirm voltage is between 0.15 ~ 4mV.

Note)

- If R289(L ch) or R288(R ch) have already been cut off and idling current does not flow, reconnect R289(1kΩ) or R288(1kΩ).
- Q117 and Q118 are transistors for temperature correction.
Apply silicone grease to the contact surface with the heat sink.

TEST MODE

CAUTION : Before setting to the TEST mode, write down the existing preset memory content of the Tuner in a table as shown below. (This is because setting to the TEST mode will cause the memory content to be as factory set, i.e., all the preset memory by the user will be erased.)

Preset group	P1	P2	P3	P4	P5	P6	P7	P8
A								
B								
C								
D								
E								

How to start

Turn the POWER switch ON while pressing the P6 and P8 keys simultaneously. The unit enters the TEST mode for the display check (All display segments light immediately).

After that, the DISPLAY mode switches by means of the PRESET STATION keys.

Content of the TEST mode key

- P1 key : ALL LIGHTS ON mode
- P2 key : LIGHTS OFF mode
- P3 to 8 keys : The mode is switched to NORMAL and the TEST mode is cancelled.

How to cancel

Normal operation is restored when the POWER switch is turned OFF or the P3 to 8 keys pressed. At the same time, the factory preset memory is also restored.

Factory preset memory content

Preset group	P1	P2	P3	P4
A/C/E	87.5MHz	90.1MHz	95.1MHz	98.1MHz
B/D	630kHz	1080kHz	1440kHz	530kHz (U, C, R) 531kHz (R, A)

FM Adjustment

● **Before Adjustment**

- 1) For dB, $1\mu V = 0dB\mu$ applies.
Example : $60dB\mu = 1mV$
- 2) 100% modulation means that the frequency deviation is 75kHz.

- 3) Install the Matching Transformer and connect FM SG.
- 4) Set each switch at the following position unless otherwise specified.

INPUT SELECTOR..... TUNER
 TUNING MODE AUTO
