## SERVICE MANUAL

### IMPORTANT NOTICE

This manual has been provided for the use of authorized YAMAHA Retailers and their service personnel. It has been assumed that basic service procedures inherent to the industry, and more specifically YAMAHA Products, are already known and understood by the users, and have therefore not been restated.

**WARNING:** Failure to follow appropriate service and safety procedures when servicing this product may result in personal injury, destruction of expensive components, and failure of the product to perform as specified. For these reasons, we advise all YAMAHA product owners that any service required should be performed by an authorized YAMAHA Retailer or the appointed service representative.

**IMPORTANT:** The presentation or sale of this manual to any individual or firm does not constitute authorization, certification or recognition of any applicable technical capabilities, or establish a principle-agent relationship of any form.

The data provided is believed to be accurate and applicable to the unit(s) indicated on the cover. The research, engineering, and service departments of YAMAHA are continually striving to improve YAMAHA products. Modifications are, therefore, inevitable and specifications are subject to change without notice or obligation to retrofit. Should any discrepancy appear to exist, please contact the distributor's Service Division.

**WARNING:** Static discharges can destroy expensive components. Discharge any static electricity your body may have accumulated by grounding yourself to the ground buss in the unit (heavy gauge black wires connect to this buss).

**IMPORTANT:** Turn the unit OFF during disassembly and part replacement. Recheck all work before you apply power to the unit.

## ■ TO SERVICE PERSONNEL

### 1. Critical Components Information

Components having special characteristics are marked  $\triangle$  and must be replaced with parts having specifications equal to those originally installed.

### 2. Leakage Current Measurement (For 120V Models Only)

When service has been completed, it is imperative to verify that all exposed conductive surfaces are properly insulated from supply circuits.

- Meter impedance should be equivalent to 1500 ohm shunted by 0.15 $\mu$ F.
- Leakage current must not exceed 0.5mA.

- Be sure to test for leakage with the AC plug in both polarities.

### “CAUTION”

“F311 : FOR CONTINUED PROTECTION AGAINST RISK OF FIRE, REPLACE ONLY WITH SAME TYPE 10A, 250V FUSE.”

### CAUTION

F311 : REPLACE WITH SAME TYPE 10A, 250V FUSE.

### ATTENTION

F311 : UTILISER UN FUSIBLE DE RECHANGE DE MEME TYPE DE 10A, 250V.

## WARNING: CHEMICAL CONTENT NOTICE!

The solder used in the production of this product contains LEAD. In addition, other electrical/ electronic and/or plastic (where applicable) components may also contain traces of chemicals found by the California Health and Welfare Agency (and possibly other entities) to cause cancer and/or birth defects or other reproductive harm.

**DO NOT PLACE SOLDER, ELECTRICAL/ ELECTRONIC OR PLASTIC COMPONENTS IN YOUR MOUTH FOR ANY REASON WHATSOEVER!**

Avoid prolonged, unprotected contact between solder and your skin! When soldering, do not inhale solder fumes or expose eyes to solder/flux vapor!

If you come in contact with solder or components located inside the enclosure of this product, wash your hands before handling food.

### WARNING

**Do not change the IMPEDANCE SELECTOR switch setting while the power to this unit is on, otherwise this unit may be damaged.**

## ■ SELF DIAGNOSIS FUNCTION

This product has a built-in self diagnosis function (DIAG) to facilitate inspection, measurement and determination of a faulty item, if any. There are 13 DIAG menu items each of which has sub-menu items.

Listed in the table below are menu items and sub-menu items.

(Start-up and menu operation of DIAG is executed by using the main unit and its remote control unit.)

### ● Starting DIAG

Press the "POWER" (STANDBY/ON) key of the main unit while pressing the "EFFECT" key and the "6CH INPUT" key located in the sealing panel of the main unit simultaneously, and DIAG will be activated.

### ● Starting DIAG in the protection cancel mode

If the protection function works and causes hindrance to trouble diagnosis, cancel the protection function as described below, and it will be possible to enter the DIAG mode. (The protection function other than the excess current detect function will be cancelled.)

Press the "POWER" (STANDBY/ON) key while pressing the "EFFECT" key and the "6CH INPUT" key simultaneously. At this time, keep pressing the "EFFECT" key and the "6CH INPUT" for 3 seconds or longer.

In this mode, " ZONE 2 " in the FL display of the main unit flashes.

#### CAUTION!

Using this product with the protection function cancelled may cause damage to itself. Use special care for this point when using this mode.

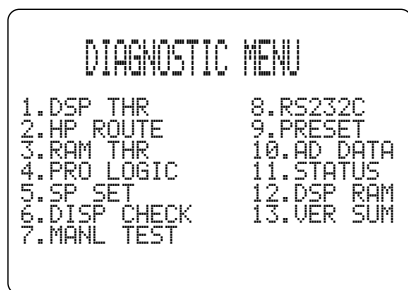

### ● Canceling DIAG

Turn off the power by pressing the "POWER" (STANDBY/ON) key of the main unit or the "POWER" key of the remote control unit.

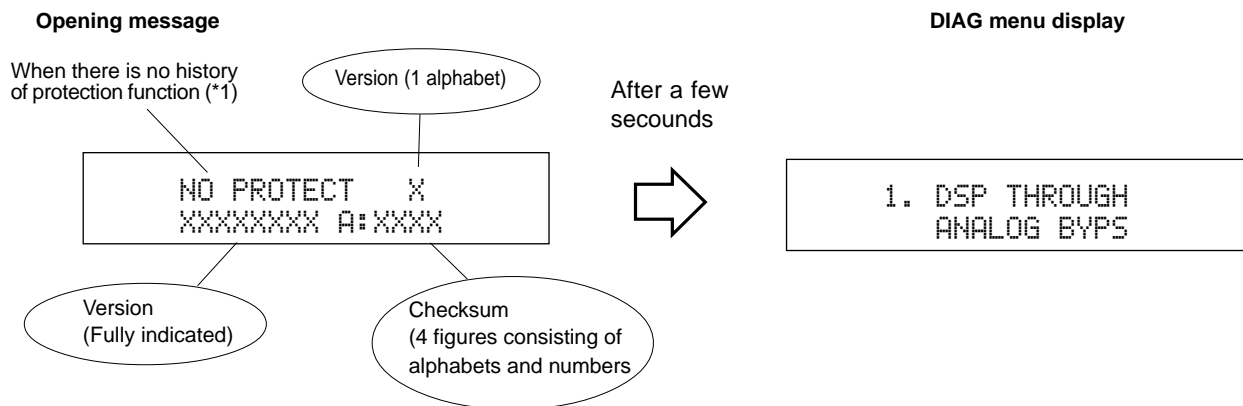

CAUTION: When canceling this function, check that DIAG menu No.9 PRESET (memory initialization inhibited/reserved) has been set. (To keep the user memory, be sure to select "INHIBIT" (initialization inhibited) from the No.9 PRESET menu before canceling the DIAG function.)

● Display at the start of DIAG

The diagnostic menu appears on the monitor screen. (It remains on display until it is canceled.)

On the FL display of the main unit, an opening message (including the version, checksum and the history of protection function) appears for a few seconds followed by the diagnostic menu display of 1 DSP THROUGH: ANALOG BYPS.

Checksum (4 figures consisting of alphabets and numbers)

The checksum is obtained by adding 4M bits per 16bits of the entire program code and expressing the result as a 4-figure hexadecimal data. (0xffff is added for the area where no code has been entered and for the area other than ROM code.)

(\*1) If the history of the protection function has been recorded, the type of the protection function and the voltage value recorded last are displayed.

**In the case where the protection function works after DIAG has been started and the power is turned off ;**  
When the protection function (\*2) works, the history of the protection function appears on display and the power turns off. Repair the faulty parts according to the displayed history.

(\*2) When an excess current or any other faulty condition is found with the power source, DC, etc., the protection function forces the power to turn off.

```

#### I PROTECTION display

(When the power is turned on without an abnormality corrected, the protection function works the moment the power relay is turned on to shut off the power supply.)

**Cause:** There is an abnormal current flow to the power amplifier.  
**Supplementary information:** As the current of the power transistor of each channel is detected, the abnormal channel can be identified by checking the current detect transistor.

**Reference:** If I PROTECTION function has worked after SP relay ON, a warning message "CHECK SP WIRES" appears the next time the power is turned on. This indicates that some trouble exists after the SP terminal, such as a short-circuit of the speaker cable.

```

#### PS PRT display

(When the power is turned on without an abnormality corrected, the protection function works about 1 second later to shut off the power supply. Display may not be provided, if there is an abnormality with the power supply for the display.)

**Cause:** There is an abnormality in the power supply section (voltage).  
**Supplementary information:** As the power from following sources is detected, it is possible to determine where an abnormality exists.

Transformer secondary winding  
VI X 2(CB358), OR x 2(CB359)

```

#### DC PRT display

(When the power is turned on without an abnormality corrected, the protection function works about 3 seconds later to shut off the power supply.)

**Cause:** A DC output from the power amplifier of each channel is detected.

#### TMP PRT display

(When the power is turned on without an abnormality corrected, the protection function works about 1 second later to shut off the power supply.)

**Cause:** The temperature of the heat sinks in the power amplifier is detected. When the temperature rises and an abnormality is detected, the power turns off.

Besides the above possible causes, the cause may exist in the disconnected connector or around CPU. PS PRT, DC PRT and TMP PRT displays include the abnormal A/D value in % (voltage value obtained by considering 5V as 100%). Concerning this value, refer to DIAG menu No.10 FAN/AD described on page 24.

#### ● History of protection function

When the protection function has worked, its history is stored in memory with a backup. Even when no abnormality is noted while the unit is being serviced, an abnormality which has occurred previously can be defined as long as the backup data has been stored.

The protection history is cleared when DIAG is canceled by selecting "RESERVED" (memory initialization) from the setting items of the DIAG menu No.9 PRESET or when the backup data is erased.

## ● Operation procedure of DIAG menu and SUB-MENU

There are No.1 to No.13 MENU items and some SUB-MENU items as well.

### DIAG menu selection

Main unit: DSP PROGRAM selector (forward/reverse)

Remote control unit: Cursor  $\Delta$ (forward)/ $\nabla$ (reverse) key

### SUB-MENU selection

Main unit: EFFECT key (forward)

Remote control unit: Cursor +(forward)/-(reverse) key

Only the remote control keys indicated in the Menu List can be used to select a sub menu directly.

## ● Functions during DIAG being set

In addition to the DIAG menu, functions as listed below are available.

- Input selection (including ZONE2), 6CH input
- REC OUT switching
- ZONE2 input, volume
- Front/Center/Rear/Sub-woofer level adjustment
- Muting
- Speaker A/B
- Power on/off operation
- Master volume

It is possible to set to the following volume values using the remote control unit

Volume value (dB)	Remote control code (key)
0	7A---E0 (TUNER CHP/INDEX)
-21	7A---E1 (TUNER 9)
-40	7A---E2 (TUNER 10)
MUTE	7A---E3 (TUNER 11)

only during DIAG being set.

\* Functions related to the tuner and the set menu are not available.

\* It is possible to confirm Menu No.11 "IF STATUS" while keeping the signal process (operation status) of each DIAG menu by using the INPUT MODE key of the main unit.

## ● Initial settings used to start DIAG function

Following initial settings are used when starting the DIAG function.

When the DIAG function is canceled, the settings before starting DIAG will be restored.

- Input, ZONE2 input: DVD (6CH INPUT OFF)
- Master volume: -40dB
- ZONE2 volume: -6dB
- Front/Center/Rear/Sub-woofer level: 0dB
- Audio mute: OFF
- Speaker A/B: ON
- Speakers Settings
  - MAIN: LARGE
  - CENTER: LARGE
  - REAR: LARGE
  - REAR CENTER: LARGE
  - BASS OUT: BOTH
  - FRONT EFFECT: YES
  - MAIN LEVEL: Normal (0dB)
- DIAG menu: DSP THROUGH (ANALOG BYPASS)

# Details of DIAG menu

## 1. DSP THROUGH

There are 3 sub menu items (ANALOG BYPS, DSP 0dB, FULL BIT).

1. DSP THROUGH  
ANALOG BYPS

### ANALOG BYPS [Remote control code: 7A—90(PRG 9)]

- The input mode is fixed to use the analog (A/D) system.
- The L/R signal is output through the analog bypass without using the DSP section.
- C/RC, FL/FR, RL/RR and SWFR signals are output through DSP (see the signal path in the figure below) without using the external DRAM. (Head margin included)

#### Head margin

- CENTER: -6dBFS
- REAR CENTER: -3dBFS
- FL/FR: -6dBFS
- RL/RR: -12dBFS
- SWFR: Add L/R signal at -20dBFS.

1. DSP THROUGH  
DSP 0dB

**DSP 0dB** [Remote control code: 7A—91 (PRG 10)]

- The input signal is automatically identified and switched in the priority order of dts → DOLBY DIGITAL → PCM AUDIO → Analog (A/D) according to the signal detection.
- L/R, C/RC, FL/FR, RL/RR and SWFR signals are output through DSP (see the signal path in the figure below) without using the external DRAM. (Head margin included)

(In the case of 2-ch source)

(In the case of multi-ch source)

- AC3D3 outputs signals using DOLBY DIGITAL/dts decode operation.

Note: (SDOxx) represents a terminal name of AC3D3.

The shaded square ( ) means that the element included in it does not operate.

1. DSP THROUGH  
FULL BIT

**FULL BIT** [Remote control code: 7A—92 (PRG11)]

- The head margin is unused and the digital data is output in full bit.
- The same applies as “DSP 0dB” except that the digital data is output in full bit at D/A but SWFR is not output in full bit.

**2. HP ROUTE (Headphone route)**

There are two sub-menu items (0dB, FULL BIT).

2. HP ROUTE  
0dB

**0dB** [Remote control code: 7A—93 (PRG12)]

- The input signal is automatically identified and switched in the priority order of dts → DOLBY DIGITAL → PCM AUDIO → Analog (A/D) according to the signal detection.
  - L/R, C/RC, FL/FR, RL/RR and SWFR signals are output through DSP (see the signal path in the figure below) without using the external DRAM.
- (The SDOB output is inputted to DAC of MAIN L/R. Other than that, everything is the same as DSP THROUGH.)

### 3. RAM THROUGH

The input data is automatically identified and switched in the priority order of dts → DOLBY DIGITAL → PCM AUDIO → Analog (A/D) according to the signal detection.

The main L/R uses the analog through method when analog signals are input and the DSP through method when digital signals are input.

C/RC, RL/RR and FL/FR signals are output through the external DRAM.

3. RAM THROUGH

### 5. SPEAKERS SET

The input signal is automatically identified and switched in the priority order of dts → DOLBY DIGITAL → PCM AUDIO → Analog (A/D) according to the signal detection.

There are seven sub-menu items.

The signals output from the DSP are the same as 1. DSP THROUGH: DSP 0dB.

The analog switch settings for each sub-menu are as shown in the table below.

Sub-menu		CENTER	REAR	MAIN SP	MAIN LVL	LFE/BASS	FRONT MIX
1	MAIN : SMALL 0dB	LARGE	LARGE	SMALL	0dB	SWFR	7ch
2	MAIN : LARGE -10	LARGE	LARGE	LARGE	-10dB	BOTH	7ch

6	REAR CENTER : MUTE	LARGE	LARGE	LARGE	0dB	BOTH	7ch
7	REAR L/R: MUTE	LARGE	LARGE	LARGE	0dB	BOTH	7ch

LARGE: Signals are output in all bandwidths.

SMALL: Signals exceeding 90Hz are cut in LPF.

NONE: The center contents are distributed to the MAIN L/R channels after -3dB.

## 6. DISPLAY CHK

This program is used to check lighting of the FL display which changes as shown below according to operation of the sub-menu.

The signals are processed using EFFECT OFF. (The L/R signals are output using ANALOG MAIN BYPASS setting.)

The video signal internal/external synchronization switching is controlled by the microprocessor. When the initial message is displayed and all the FL segments light up, it is switched to internal synchronization but other than that it is forced to the external synchronization setting.

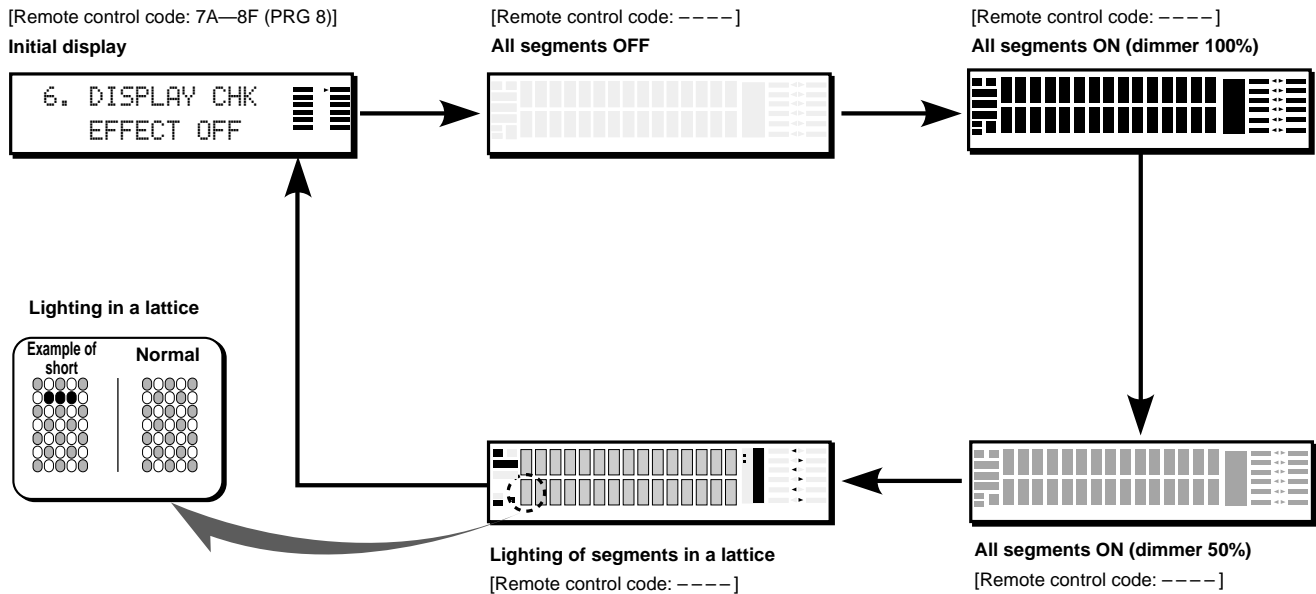

Also, except for the initial display, 128 pictographs for checking the OSD driver are used for the video signal output display (monitor screen).

### Reference (PRE OUT)

Segment conditions of the FL driver (IC901, IC902) and the FL tube are checked by turning ON and OFF all segments. Next, the operation of the FL driver is checked by using the dimmer control. Then a short between segments next to each other is checked by turning ON and OFF all segments alternately (in a lattice). (In the above example, the segments in the second row from the top are shorted.)

## 7. MANUAL TEST

The test noise is output by the noise generator with a built-in DSP from the channels specified by the sub-menu. There are ten sub-menu items.

```
7. MANUAL TEST
  ALL
```

**ALL** [Remote control code: 7A—00 (TAPE PLAY)]

Noise is output from all channels.

**MAIN L** [Remote control code: 7A—01 (TAPE RW)]

Noise is output from the MAIN L channel.

**CENTER** [Remote control code: 7A—02 (TAPE FW)]

Noise is output from the CENTER channel.

**MAIN R** [Remote control code: 7A—03 (TAPE STOP)]

Noise is output from the MAIN R channel.

**REAR R** [Remote control code: 7A—04 (TAPE REC)]

Noise is output from the REAR R channel.

**REAR C** [Remote control code: 7A—05 (TAPE MUTE)]

Noise is output from the REAR CENTER channel.

**REAR L** [Remote control code: 7A—06 (TAPE A/B)]

Noise is output from the REAR L channel.

**FRONT L** [Remote control code: 7A—07 (TAPE DIR A)]

Noise is output from the FRONT L channel.

**FRONT R** [Remote control code: 7A—08 (CD PLAY)]

Noise is output from the FRONT R channel.

**LFE** [Remote control code: 7A—09 (CD STOP)]

Noise is output from the LFE (sub-woofer) channel.

## 8. RS-232C

This menu is used to check transmission of the data and the flow port of the hardware.

With the power turned off, short between pins No.2 (RxD) and No.3 (TxD) and between pins No.7 (RTS) and No.8 (CTS) of the RS-232C terminal. (Be sure to turn off the power when shorting pins.)

Start DIAG and select the menu.

There are two sub-menu items.

The signals are processed using EFFECT OFF. (The L/R signals are output using ANALOG MAIN BYPASS setting.)

```
8. RS-232C
TxD/RxD DATA:XX
```

**TxD/RxD DATA** [Remote control code: ----]

This sub-menu is used to check transmission of the test data. "OK" appears when the data is transmitted properly and "NG" when it is not.

In this mode, NULL command transmission is continued after the test command is transmitted.

```
8. RS-232C
HARD FLOW :XX
```

**HARD FLOW** [Remote control code: ----]

This sub-menu is used to check operation of the flow port of the hardware. "OK" appears when the check result is satisfactory and "NG" when it is not.

**9. PRESET**

This menu reserves and inhibits initialization of the back-up RAM (parameter, set menu contents, etc. for the sound field program).

The signals are processed using EFFECT OFF. (The L/R signals are output using ANALOG MAIN BYPASS setting.)

9. PRESET  
INHIBITED

**INHIBIT (Initialization inhibited)** [Remote control code: ----]  
RAM initialization is not executed. Select INHIBIT to protect the values set by the user.

9. PRESET  
RESERVED

**RESERVED (Initialization reserved)** [Remote control code: 7A—57 (SLEEP)]  
Initialization of the back-up RAM is reserved. RESERVED should be selected when shipping out of the factory or resetting RAM. Protection history is also cleared.

\* In order to ensure that back-up RAM be initialized without fail, turn off the power and then on by pressing the POWER (STANDBY/ON) key after selecting RESERVED. Initialization is executed at this point.

**CAUTION** : Before setting to the PRESET RESERVED, write down the existing preset memory content of the Tuner in a table as shown below. (This is because setting to the PRESET RESERVED will cause the user memory content to be erased.)

### 11. IF STATUS (Input function status)

Using this menu, the status data is displayed in the hexadecimal notation one after another.

During signal processing, the status before execution of this menu is maintained.

To convert the analog input to the digital input, use the following procedure.

- 1) Select either DIAG menu No.3 or No.4 and enter a digital signal.
- 2) Menu No.11 can be selected by pressing the INPUT MODE key of the main unit. (The input mode will be fixed to the digital mode.)

There are 17 sub-menu items.

The following status information is displayed in the hexadecimal notation according to the sub-menu operation.

```
11. IF STATUS

ADDR	Short or open of address bus

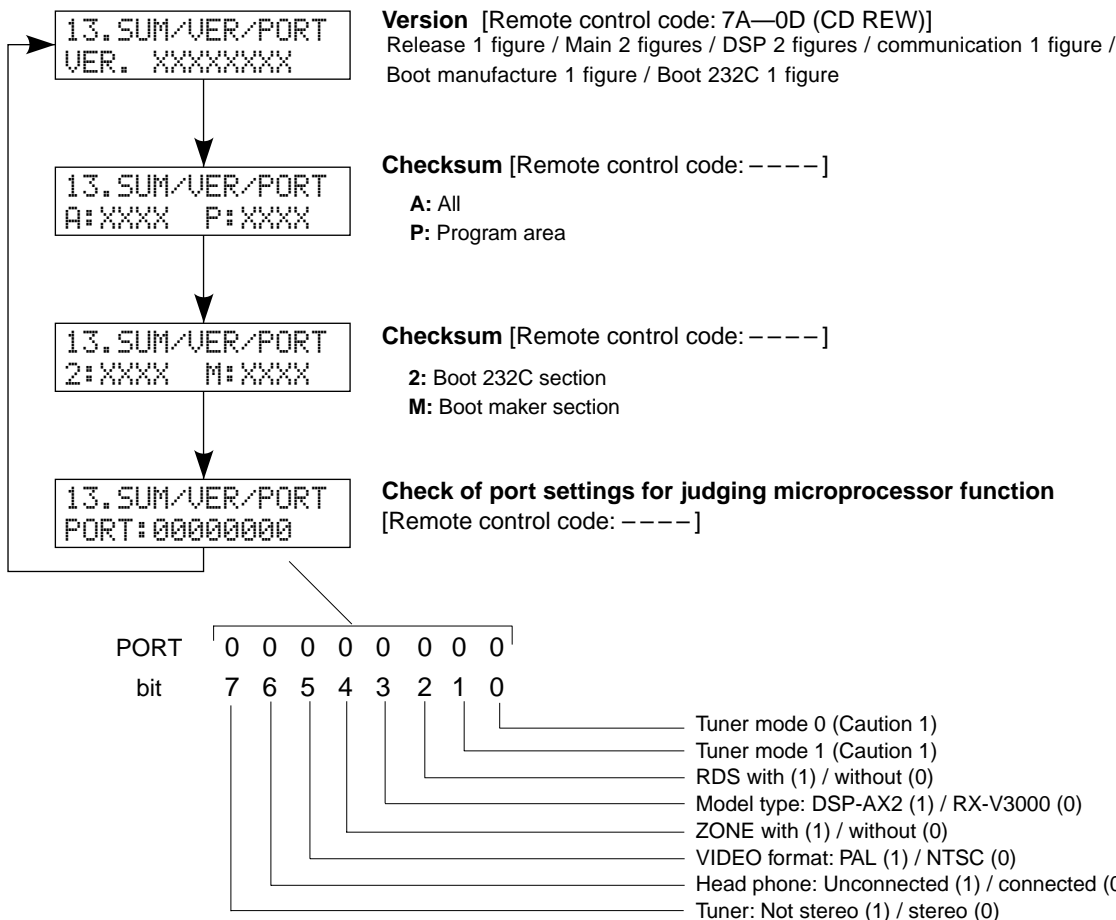

**13. SUM/VER /PORT**

There are four sub-menu items.

Indicates the program version, checksum, specified port of the microprocessor (IC526 of the function circuit board).

The checksum is obtained by adding data for every 16 bits for each program area and expressing the result as a 4-figure hexadecimal data.

The signals are processed using EFFECT OFF. (The L/R signals are output using ANALOG MAIN BYPASS setting.)

Pin No.	Symbol	Terminal name	Function
1	VSS1	Ground terminal	Connection to GND (Digital system ground terminal)
2	XTAL IN	Crystal oscillation terminal	Terminal to connect the crystal of the crystal oscillator for internal synchronous signal generation and a capacitor or to input an external clock. (2fsc or 4fsc)
3	XTAL OUT		
4	CTRL1	Crystal oscillation input switching terminal	Switching terminal between the mode to input a clock externally and the mode for crystal oscillation. [L] = Crystal oscillation, [H] = External clock input
5	BLANK	Blank output terminal	Terminal to output the blank signal (character and bordering OR signal) (MOD0 : complex synchronous signal output at [H]). When resetting (RST terminal = [L]), a crystal oscillation clock is output (but not when resetting by the command).
6	OSC IN	LC oscillation terminal	Terminal to connect the coil of the oscillator for character output dot clock generation and a capacitor.
7	OSC OUT		
8	CHARA	Character output terminal	Terminal to output a character signal (MOD0 : It becomes an output terminal to judge the external synchronous signal at [H] and outputs the result after judging existence of the external synchronous signal. When a synchronous signal exists, [H] is output.) When resetting (RST terminal = [L]), a dot clock (LC oscillation) is output (but it is not output when reset by the command.)
9	/CS	Enable input terminal	Serial data input enable input terminal. The serial data input becomes enable at [L]. A pull-up resistor is built in (hysteresis input).
10	SCLK	Clock input terminal	Input terminal of clock for serial data input. A pull-up resistor is built in (hysteresis input).
11	SIN	Data input terminal	Serial data input terminal. A pull-up resistor is built in (hysteresis input).
12	VDD2	Power supply terminal	Power supply terminal for complex image signal level adjustment (Power supply for analog system)
13	CV OUT	Video signal output terminal	Output terminal for complex image signal.
14	NC		Connected to GND or unconnected.
15	CV IN	Video signal input terminal	Input terminal for complex image signal.
16	VDD1	Power supply terminal	Power supply terminal (+5V : power supply for digital system)
17	SYN IN	Synchronous separation circuit input terminal	Video signal input terminal of the built-in synchronous separation circuit (When the built-in synchronous separation circuit is not used, it becomes a horizontal synchronous signal input or a complex synchronous signal input.)
18	SEP C	Synchronous separation circuit bias voltage terminal	Terminal to monitor built-in synchronous separation circuit bias voltage.
19	SEP OUT	Complex synchronous signal output terminal	Terminal to output a complex synchronous signal of built-in synchronous separation circuit ([H] when internally synchronized at MOD1 : [H], [L] output when externally synchronized) (When the built-in synchronous separation circuit is not used, SYNIN input signal is output.)
20	SEP IN	Vertical synchronous signal input terminal	Terminal to input a vertical synchronous signal by integrating the output signal of SEPOUT terminal. Connect the integration circuit between SEPOUT terminals. Fix it to VDD1 when not used.
21	CTRL2	NTSC/PAL-M switching input terminal	Pin setting has a priority over switching of NTSC/PAL/PAL-M/PAL-N method. The NTSC method is selected after [L]= reset. NTSC/PAL/PAL-M/PAL-N method setting by a command is effective. [H] = PAL-M method.
22	CTRL3	SEPIN input control terminal	Terminal to control whether or not to input VSYNC signal into SEPIN input terminal. [L] = VSYNC inputted, [H] = VSYNC not inputted.
23	/RST	Reset input terminal	System reset input terminal. A pull-up resistor is built in (hysteresis input).
24	VDD1	Power supply terminal (+5V)	Power supply terminal (+5V : power supply for digital system)
