Trans Canada Highway  
Dorval, Quebec (514) 683-6993

# ETI PCB Nega

HERE WE present negatives for September, October, and November. Unfortunately we have been unable to include every pcb, therefore we have tried to select those most amenable to this method of production. These negs can be used with presensitized boards (eg. Injectoral). Typical exposure times under a No. 2 photoflood bulb with reflector at ten inches we expect to be around 20 minutes. Use test strip to make test exposures to find optimum exposure for your setup. Full details were given in Jan. 78 ETI.
