

261 transistor battery clip

Darryl Green of Elanora Qld. is another enterprising experimenter.

I was breadboarding a small circuit requiring an op amp and ± 9 V rails and found that I only had one 216 9 V battery clip.

But I did have an old 216 battery and discovered that by prising the metal case open I could remove the top plate with the clips mounted on it.

I then soldered wires on to the back of the plate, taking care not to melt the plastic. Hey presto! One battery clip.
