Tunable aerial amplifier

There is a mistake in the component layout for the PC board (elektor 1, p. 42). One tap of coil L_1 is shown connected to ground, whereas it should be connected to the junction of R_2 and C_2 as shown in the circuit diagram (figure 2), which is the neighbouring pin on the coil former. The PC board itself is correct.

The FETs mentioned in this article are supplied by the following manufacturers:
Siliconix: E300, E310, U310, E304;
Teledyne: U1994E, 2N4416, 2N5397;
Signetics: SD201.
