

Introducing . . .

AccuMeasure

The AccuMeasure is an electronic distance measuring instrument which uses a disposable thread to measure horizontal and vertical distances, angles, and gives 47 more trigonometric, algebraic, and arithmetic functions. Distances can be measured in any Imperial or Metric unit. Angles can be measured in degrees, radians, or grads.

The AccuMeasure is accurate to within one decimeter over any distance, and holds a six mile spool of thread in its lightweight, shatterproof, and water-resistant case. Unlike other field measurement tools the AccuMeasure is fast, rugged, compact, and features one-man operation. Thread stretching problems are a thing of the past - the AccuMeasure calculates and then eliminates errors due to stretching thread.

The AccuMeasure is modestly priced. It is about the same price as two chain tapes, however it lasts years longer, doesn't rust, and doesn't have to be rewound. The AccuMeasure comes complete with an owners manual, case, strap, charts and appendices. AccuMeasure is a product of Canada and comes with 6 month guarantee. Servicing is as fast as return mail and reasonably priced.

Call today for a free demonstration at no obligation. See for yourself how the amazing AccuMeasure measures up .
