Notes & Errata

Low Ohms Tester for DMMs, Feb. 1988: the $10\text{k}\Omega$ feedback resistor between pins 6 and 2 of IC1 is incorrectly shown on the wiring diagram (Fig.2) as $1\text{k}\Omega$.

Switchmode Battery Charger, Sept. 1988: pin 11 of IC1 should be shown earthed on the circuit diagram on page 79.

Hands-Free Speakerphone, September 1988: the text on page 19 concerning "initial circuit checks" has an error. The external 25 to 50-volt supply should be connected via a 560Ω resistor to board inputs 1 and 6, not 1 and 3.
