## TABLE OF CONTENTS

## Self-diagnosis display

This system has a Self-diagnosis display function to let you know if there is a system malfunction. The display shows a code made up of three letters and a message alternately to show you the problem. To solve the problem refer to the following list. If any problem persists, consult your nearest Sony dealer.

### C11/Protected

The MD is protected against erasure.

Remove the MD and slide the tab to close the slot (see page 16).

### C12/Cannot Copy

You tried to record a CD or MD with a format that the system does not support, such as a CD-ROM.

→ Remove the disc and turn off the system once, then turn it on again.

### C13/REC Error

Recording could not be performed properly.

→ Move the system to a stable place, and start recording over from the beginning.

The MD is dirty or scratched, or the MD does not meet the standards.

→ Replace the MD and start recording over from the beginning.

### C13/Read Error

The MD deck cannot read the disc information properly.

→ Remove the MD once, then load it again.

### C14/Toc Error

The MD deck cannot read the disc information properly.

→ Replace the MD.

→ Erase all the recorded contents of the MD using All Erase Function (see page 27).

### C41/Cannot Copy

The sound source is a copy of commercially available music software.

→ The Serial Copy Management System prevents making a digital copy (see page 47).

### SERVICING NOTE

#### **NOTES ON HANDLING THE OPTICAL PICK-UP BLOCK OR BASE UNIT**

The laser diode in the optical pick-up block may suffer electrostatic break-down because of the potential difference generated by the charged electrostatic load, etc. on clothing and the human body. During repair, pay attention to electrostatic break-down and also use the procedure in the printed matter which is included in the repair parts.

The flexible board is easily damaged and should be handled with care.

#### **FOR CD**

#### **NOTES ON LASER DIODE EMISSION CHECK**

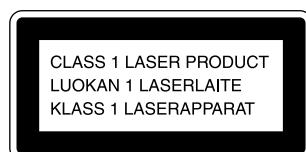

The laser beam on this model is concentrated so as to be focused on the disc reflective surface by the objective lens in the optical pick-up block. Therefore, when checking the laser diode emission, observe from more than 30 cm away from the objective lens.

#### **FOR MD**

#### **NOTES ON LASER DIODE EMISSION CHECK**

Never look into the laser diode emission from right above when checking it for adjustment. It is feared that you will lose your sight.

Laser component in this product is capable of emitting radiation exceeding the limit for Class 1.

This appliance is classified as a CLASS 1 LASER product. The CLASS 1 LASER PRODUCT MARKING is located on the rear exterior.

This caution label is located inside the unit.

#### **CAUTION**

Use of controls or adjustments or performance of procedures other than those specified herein may result in hazardous radiation exposure.

#### **Notes on chip component replacement**

- Never reuse a disconnected chip component.
- Notice that the minus side of a tantalum capacitor may be damaged by heat.

#### **Flexible Circuit Board Repairing**

- Keep the temperature of soldering iron around 270°C during repairing.
- Do not touch the soldering iron on the same conductor of the circuit board (within 3 times).
- Be careful not to apply force on the conductor when soldering or unsoldering.

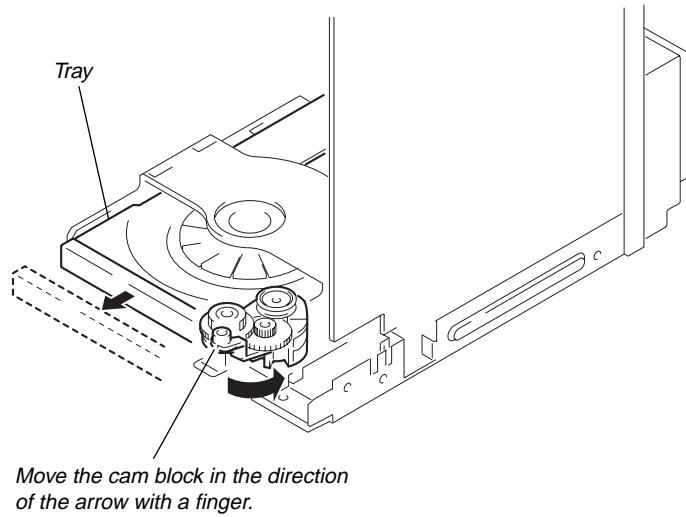

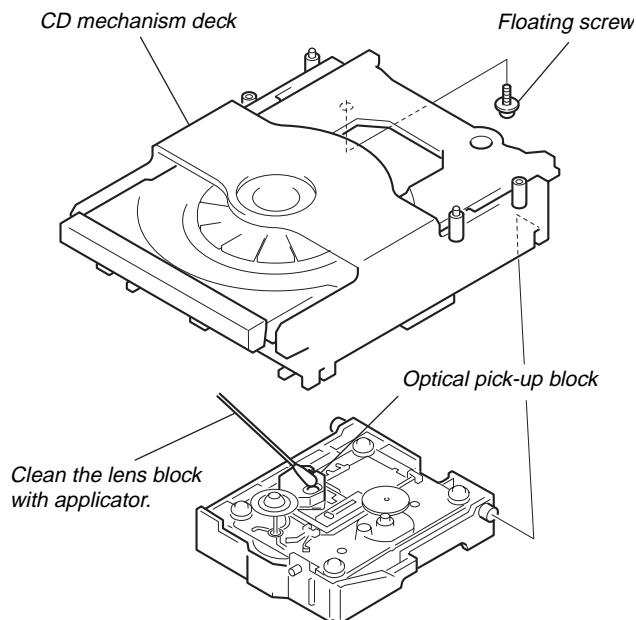

#### **SAFETY-RELATED COMPONENT WARNING!!**

**COMPONENTS IDENTIFIED BY MARK ▲ OR DOTTED LINE WITH MARK ▲ ON THE SCHEMATIC DIAGRAMS AND IN THE PARTS LIST ARE CRITICAL TO SAFE OPERATION. REPLACE THESE COMPONENTS WITH SONY PARTS WHOSE PART NUMBERS APPEAR AS SHOWN IN THIS MANUAL OR IN SUPPLEMENTS PUBLISHED BY SONY.**

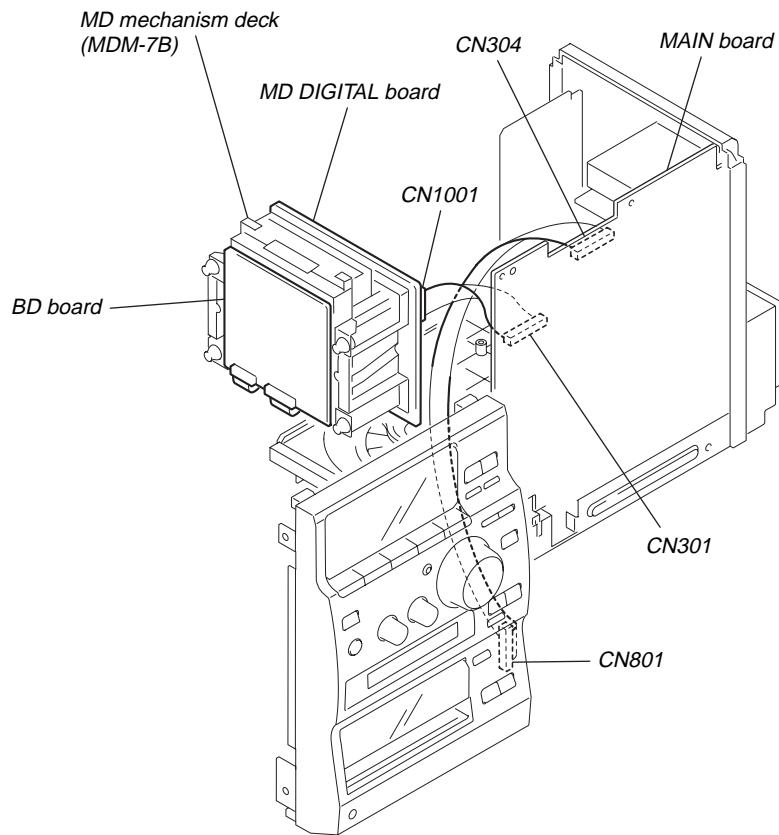

#### **与安全有关的零部件须知**

在原理图上用阴影及△标记来识别的零部件在安全操作上是具有关键性的。这些零部件要用本手册中所示的部件号对应的索尼零部件进行更换。

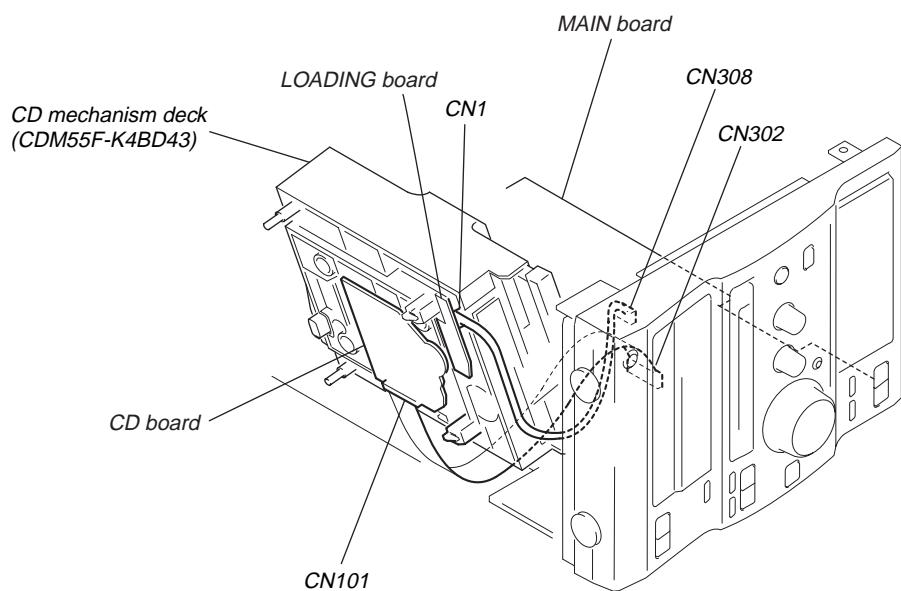

在安全操作上具有关键性的电路调整与索尼公司出版的维修手册完全一致。在更换关键零部件时或怀疑动作失常时，请进行这些调整操作。

## 8. AUTOMATIC SELF-DIAGNOSIS FUNCTION

This test mode performs CREC and CPLAY automatically for mainly checking the characteristics of the optical pick-up.

To perform this test mode, the laser power must first be checked.

Perform AUTO CHECK after the laser power check and Iop Compare.

### Procedure:

1. Press the **[◀◀ "R"]** or **[▶▶ "R"]** button to display “AUTO CHECK” (C01).
2. Press the **[ENTER/YES "R"]** button. If “LDPWR ミチェック” is displayed, it means that the laser power check has not been performed. In this case, perform the laser power check and Iop Compare, and then repeat from enter the MD test mode.
3. If a disc is in the mechanical deck, it will be ejected forcibly. “DISC IN” will be displayed in this case. Load a test disc (MDW-74/GA-1) which can be recorded.
4. If a disc is loaded at step 3, the check will start automatically.
5. When “XX CHECK” is displayed, the item corresponding to XX will be performed. When “06 CHECK” completes, the disc loaded at step 3 will be ejected. “DISC IN” will be displayed. Load the check disc (TDYS-1).
6. When the disc is loaded in step 5, the check will automatically be resumed from “07 CHECK”.
7. After completing to “0C CHECK” of test item 12, check OK or NG will be displayed. If all items are OK, “CHK ALL OK” will be displayed. If any item is NG, it will be displayed as “NG:xxxx”.

When “CHK ALL OK” is displayed, it means that the optical pick-up is normal. Check the operations of other parts (spindle motor, sled motor, etc.).

When displayed as “NG:xxxx”, it means that the optical pick-up is faulty. In this case, replace the optical pick-up.

**MD SECTION****Note 1:**About "R"

As this unit has only a few buttons, some operations require the use of remote commander (RM-SCP500/provided with unit: 1-476-754-11) buttons. These operations are indicated as "R" in this manual.

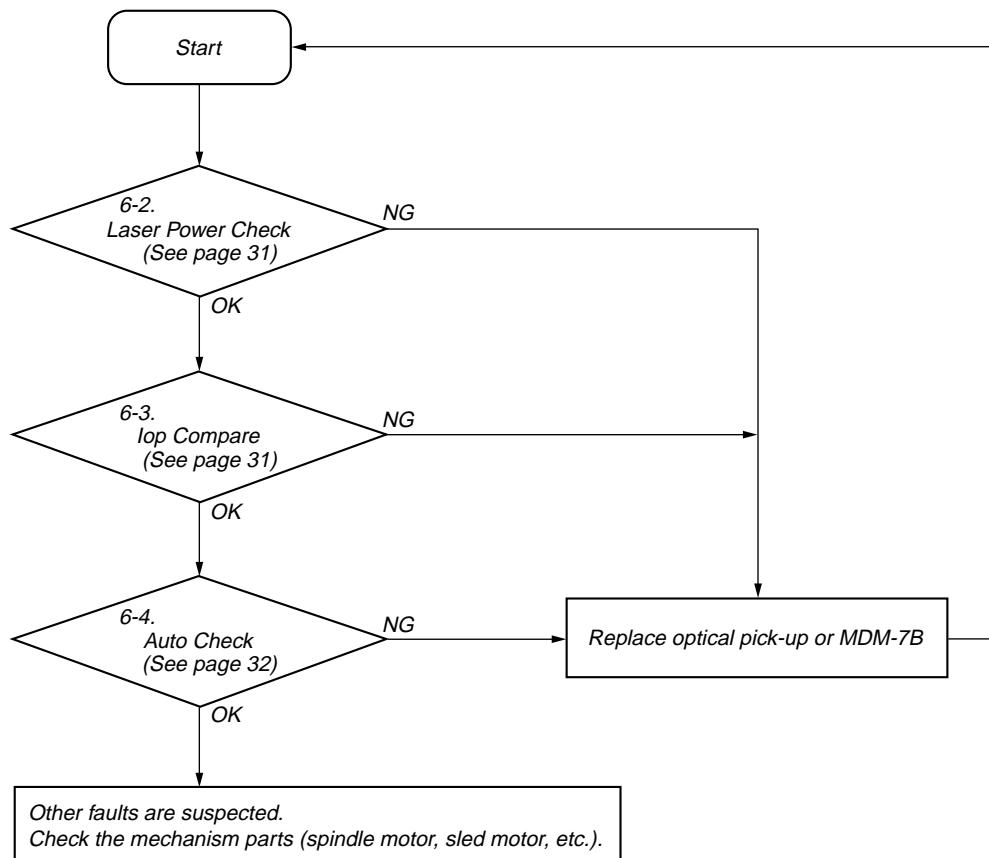

Example: [MENU/NO "R"]...Press the [MENU/NO] button of the remote commander.

**Note 2:**Incorrect operations may be performed if the MD test mode is not entered properly.

In this case, press the [V<sub>U</sub>] button to turn the power off, and retry to enter the MD test mode.

**1. PARTS REPLACEMENT AND ADJUSTMENT**

If malfunctions caused by optical pick-up such as sound skipping are suspected, follow the following check.

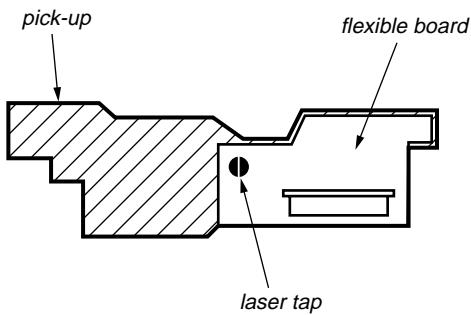

**Check before replacement**

## 2. PRECAUTIONS FOR CHECKING LASER DIODE EMISSION

To check the emission of the laser diode during adjustments, never view directly from the top as this may lose your eye-sight.

## 3. PRECAUTIONS FOR USE OF OPTICAL PICK-UP (KMS-260B/260E)

As the laser diode in the optical pick-up is easily damaged by static electricity, solder the laser tap of the flexible board when using it. Before disconnecting the connector, desolder first. Before connecting the connector, be careful not to remove the solder. Also take adequate measures to prevent damage by static electricity. Handle the flexible board with care as it breaks easily.

**Optical pick-up flexible board**

## 4. PRECAUTIONS FOR ADJUSTMENTS

1. When replacing the following parts, perform the adjustments and checks with the mark ○ in the order shown in the following table.
2. Set the MD test mode when performing adjustments.  
After completing the adjustments, exit the MD test mode.  
Perform the adjustments and checks in "Group Service" of the MD test mode.
3. Perform the adjustments to be needed in the order shown.
4. Use the following tools and measuring devices.
  - Check Disc (TDYS-1) (Part No. : 4-963-646-01)
  - Test Disk (MDW-74/GA-1) (Part No. : 4-229-747-01)
  - Laser power meter LPM-8001 (Part No. : J-2501-046-A)  
or  
MD Laser power meter 8010S (Part No. : J-2501-145-A)\*<sup>1</sup>
  - Oscilloscope (Measure after performing CAL of prove.)
  - Digital voltmeter
  - Thermometer
  - Jig for checking BD board waveform  
(Part No. : J-2501-196-A)
5. When observing several signals on the oscilloscope, etc., make sure that VC and ground do not connect inside the oscilloscope.  
(VC and ground will become short-circuited.)
6. Using the above jig enables the waveform to be checked without the need to solder.  
(Refer to Servicing Notes on page 8.)
7. As the disc used will affect the adjustment results, make sure that no dusts nor fingerprints are attached to it.

\*<sup>1</sup> **Laser power meter**

When performing laser power checks and adjustment (electrical adjustment), use of the new MD laser power meter 8010S (Part No. J-2501-145-A) instead of the conventional laser power meter is convenient.

It sharply reduces the time and trouble to set the laser power meter sensor onto the objective lens of optical pick-up.

## 6. CHECKS PRIOR TO REPAIRS

These checks are performed before replacing parts according to “approximate specifications” to determine the faulty locations. For details, refer to “Checks Prior to Parts Replacement and Adjustments in MD” (see page 25).

### 6-1. Temperature Compensation Offset Check

When performing adjustments, set the internal temperature and room temperature to 22 to 28°C.

#### Procedure:

1. Press the [◀◀ "R"] or [▶▶ "R"] button to display “TEMP CHECK” (C12).
2. Press the [ENTER/YES "R"] button.
3. “T=@(@##) [OK]” should be displayed. If “T=@@ (@##) [NG]” is displayed, it means that the results are bad. (@@ indicates the current value set, and ## indicates the value written in the non-volatile memory.)

### 6-2. Laser Power Check

Before starting adjustment;

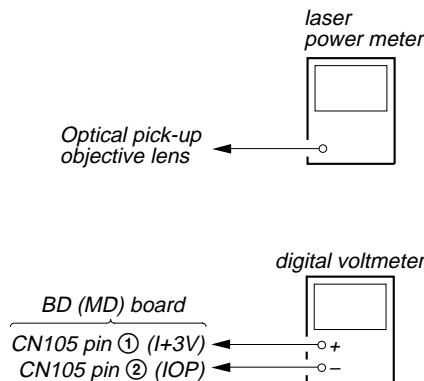

The laser power adjustment value changes depending upon the types of the optical pick-up (KMS-260B or KMS-260E).

Check the type of the optical pick-up before starting adjustment. (See the illustrations “The method of identifying the optical pick-up” on page 35)

Before checking, check the Iop value of the optical pick-up.

(Refer to 8. Recording and Displaying the Iop Information (see page 34))

#### Connection:

#### Procedure:

1. Set the laser power meter on the objective lens of the optical pick-up. (When it cannot be set properly, press the [◀◀ "R"] button or [▶▶ "R"] button to move the optical pick-up.) Connect the digital volt meter to CN105 pin ① (I+3V) and CN105 pin ② (IOP).
2. Then, press the [◀◀ "R"] or [▶▶ "R"] button and display “LDPWR CHECK” (C13).
3. Press the [ENTER/YES "R"] button once and display “LD 0.9mW\$00”. Check that the reading of the laser power meter becomes specified value.

SPECIFIED VALUE	KMS-260B	0.85 to 0.91 mW
	KMS-260E	0.90 to 0.96 mW

4. Press the [ENTER/YES "R"] button once more and display “LD 8.4mW\$00”. Check that the reading of the laser power meter and digital volt meter satisfy the specified value.

#### Specified Value:

Laser power meter reading :

KMS-260B	6.8 to 7.2 mW
KMS-260E	7.0 to 7.5 mW

Digital voltmeter reading : Optical pick-up displayed value ± 10%

#### (Optical pick-up label)

*(For details of the method for checking this value, refer to “8. Recording and Displaying the Iop Information”)*

*IOP=57.6 mA in this case*

*IOP (mA) = Digital voltmeter reading (mV)/1 (Ω)*

5. Press the [MENU/NO "R"] button and display “LDPWR CHECK” (C13) and stop the laser emission.  
(The [MENU/NO "R"] button is effective at all times to stop the laser emission.)

**Note:** After step 4, each time the [ENTER/YES "R"] button is pressed, the display will be switched to “LD 0.7W\$00” and “LD 6.2mW\$00”. Nothing needs to be performed here.

**Checking Location:** BD (MD) board (see page 38)

### 6-3. Iop Compare

The current Iop value at laser power 7 mW output and reference Iop value (set at shipment) written in the nonvolatile memory are compared, and the rate of increase/decrease will be displayed in percentage.

**Note:** Perform this function with the optical pick-up set at room temperature.

#### Procedure:

1. Press the [◀◀ "R"] or [▶▶ "R"] button to display “Iop Compare” (C27).
2. Press the [ENTER/YES "R"] button and start measurements.
3. When measurements complete, the display changes to “± xx% yy”.  
xx is the percentage of increase/decrease, and OK or NG is displayed at yy to indicate whether the percentage of increase/decrease is within the allowable range.
4. Press the [MENU/NO "R"] button to end.

## 6-4. Auto Check

This test mode performs CREC and CPLAY automatically for mainly checking the characteristics of the optical pick-up. To perform this test mode, the laser power must first be checked. Perform Auto Check after the laser power check and Iop compare.

### Procedure:

1. Press the **[◀ R]** or **[▶ R]** button to display “AUTO CHECK” (C01).
2. Press the **[ENTER/YES R]** button. If “LDPWR ミチェック” is displayed, it means that the laser power check has not been performed. In this case, perform the laser power check and Iop Compare, and then repeat from enter the MD test mode.
3. If a disc is in the mechanical deck, it will be ejected forcibly. “DISC IN” will be displayed in this case. Load a test disc (MDW-74/GA-1) which can be recorded.
4. If a disc is loaded at step 3, the check will start automatically.
5. When “XX CHECK” is displayed, the item corresponding to XX will be performed.  
When “06 CHECK” completes, the disc loaded at step 3 will be ejected. “DISC IN” will be displayed. Load the check disc (TDYS-1).
6. When the disc is loaded in the step 5, the check will automatically be resumed from “07 CHECK”.
7. After completing to “0C CHECK” of test item 12, check OK or NG will be displayed. If all items are OK, “CHK ALL OK” will be displayed. If any item is NG, it will be displayed as “NG:xxxx”.

When “CHK ALL OK” is displayed, it means that the optical pick-up is normal. Check the operations of other parts (spindle motor, sled motor, etc.).

When displayed as “NG:xxxx”, it means that the optical pick-up is faulty. In this case, replace the optical pick-up.

## SECTION 9

### ELECTRICAL PARTS LIST

## NOTE:

- Due to standardization, replacements in the parts list may be different from the parts specified in the diagrams or the components used on the set.
- -XX, -X mean standardized parts, so they may have some difference from the original one.
- Items marked "\*" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- RESISTORS  
All resistors are in ohms.  
METAL: metal-film resistor  
METAL OXIDE: Metal Oxide-film resistor  
F: nonflammable

## • CAPACITORS:

- uF:  $\mu$ F
  - COILS
  - uH:  $\mu$ H
  - SEMICONDUCTORS
- In each case, u:  $\mu$ , for example:  
uA...:  $\mu$ A..., uPA...,  $\mu$ PA...,  
uPB...,  $\mu$ PB..., uPC...,  $\mu$ PC...,  
uPD...,  $\mu$ PD...

## • Abbreviation

- AUS : Australian model.  
CH : Chinese model.  
E51 : Chilean and Peruvian model.  
HK : Hong Kong model.

When indicating parts by reference number, please include the board name.

The components identified by mark  $\triangle$  or dotted line with mark  $\triangle$  are critical for safety. Replace only with part number specified.以阴影和 $\triangle$ 标志来识别的零部件在安全方面具有关键性。因此只能以规定号码的零部件来更换。
