5. PCB PARTS LIST

NOTES:

- Parts marked by "NSP" are generally unavailable because they are not in our Master Spare Parts List.
- Parts marked by "⊙" are not always kept in stock. Their delivery time may be longer than usual or they may be unavailable.
- The Δ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
- When ordering resistors, first convert resistance values into code form as shown in the following examples.
 - Ex.1 When there are 2 effective digits (any digit apart from 0), such as 560 ohm and 47k ohm (tolerance is shown by J=5%, and K=10%)
 - 560 Ω \rightarrow 56 \times 10¹ \rightarrow 561 RD1/4PS $\begin{matrix} 5 & 6 & 1 \\ \hline \end{matrix}$ J
 - 47k Ω \rightarrow 47 \times 10³ \rightarrow 473 RD1/4PS $\begin{matrix} 4 & 7 & 3 \\ \hline \end{matrix}$ J
 - 0.5 Ω \rightarrow 0R5 RN2H $\begin{matrix} 0 & R & 5 \\ \hline \end{matrix}$ K
 - 1 Ω \rightarrow 010 RS1P $\begin{matrix} 0 & 1 & 0 \\ \hline \end{matrix}$ K
 - Ex.2 When there are 3 effective digits (such as in high precision metal film resistors).
 - 5.62k Ω \rightarrow 562 \times 10¹ \rightarrow 5621 RN1/4SR $\begin{matrix} 5 & 6 & 2 & 1 \\ \hline \end{matrix}$ F

(2) TEST MODE

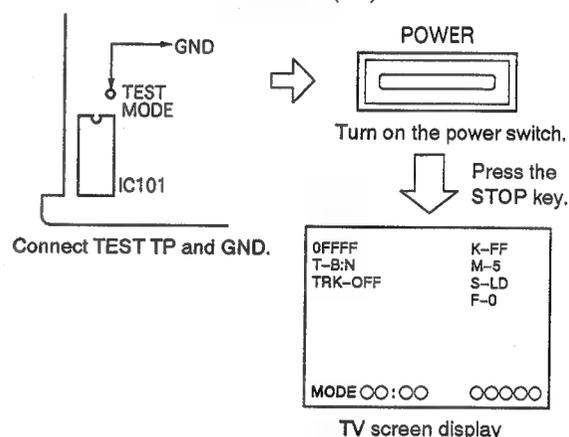

The player has a test mode function which allows the servicer to check the player's status on the TV screen by executing the respective key operation.

Also, since the TRKG servo opens and closes easily, the test mode is especially useful for mechanical adjustments.

TEST MODE INITIATION

[Procedure]

1. Remove the bonnet and disc tray.
2. Connect the TEST MODE (TP) to GND.
3. Turn on the power switch.
4. Disconnect the TEST MODE (TP) from GND.

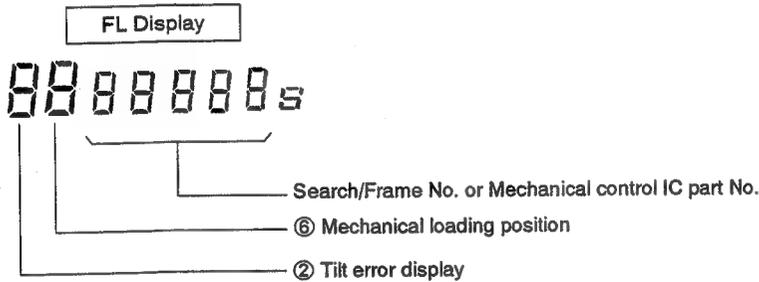

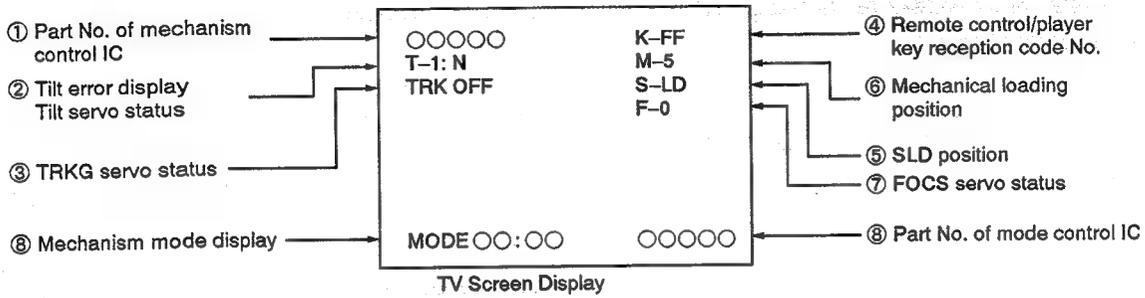

Note: When using the remote control unit (GGF1067) for the test mode.

- Press the **TEST** key after pressing the **ESC** key.

TEST MODE CANCELLATION

Turn off the power switch.

ADJUSTMENT POINTS OF THE MAIN BOARD ASSEMBLY

Adjustment Locations

● MECHANICAL ADJUSTMENTS

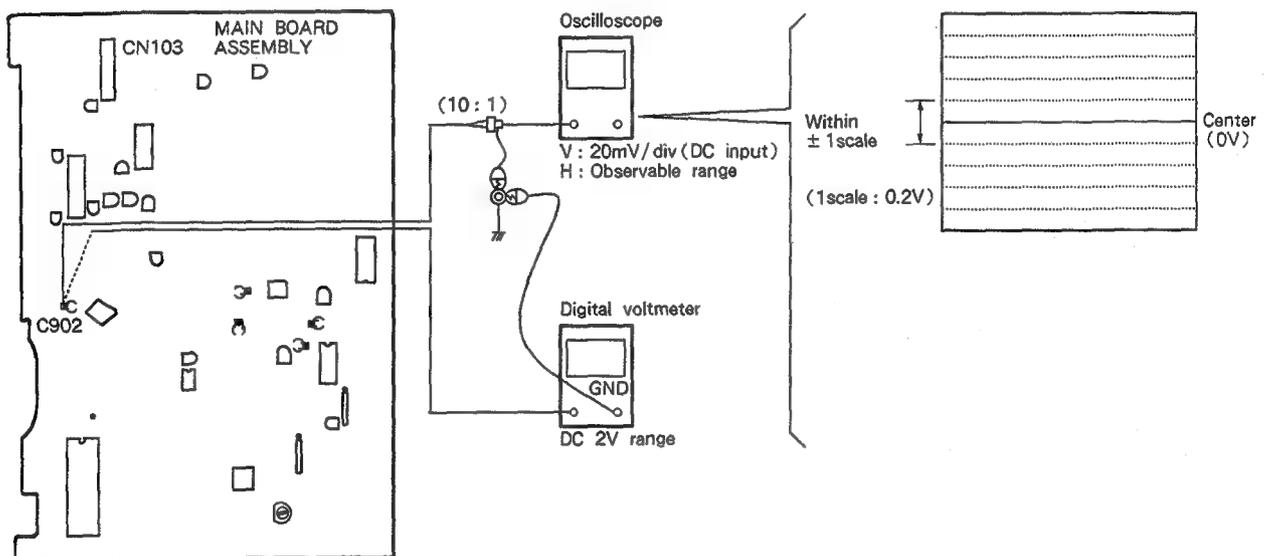

1. TILT OFFSET ADJUSTMENT

Mechanical Adjustment

- Purpose: To adjust the tilt offset voltage to 0V.
- When not properly adjusted: Playability is poor when playing side B of the disc.
Crosstalk will be generated.

Adjustment Procedure

1. Disconnect the flexible cable from CN103.
(Perform this step by turning off the power.)
2. Set the oscilloscope to no input (GND) mode and set the main scale to the center position (0V).
3. Set the oscilloscope to the DC input mode and connect to the - (minus) lead wire of C902.
4. Adjust VR610 so that the DC level which appears on the oscilloscope within \pm one scale ($\pm 0.2V$) as compared with center (0V).
5. Connect the flexible cable to CN103.
(Perform this step by turning off the power.)

How to adjustment when using the Digital voltmeter

1. Disconnect the flexible cable from CN103.

2. Connect the digital voltmeter to the - (minus) lead wire of C902.
3. Adjust VR610 so that the DC voltage becomes $0 \pm 0.2V$.
4. Connect the flexible cable to CN103.
(Perform this step by turning off the power.)

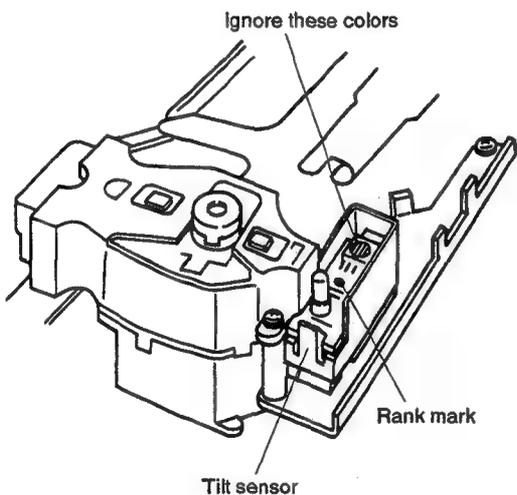

2. TILT SERVO GAIN ADJUSTMENT

Mechanical Adjustment

- Purpose: Adjustment of the tilt servo's gain according to the tilt sensor's sensitivity rank.
- When not properly adjusted: Increased tilt servo hunting and increased crosstalk.

Not null point

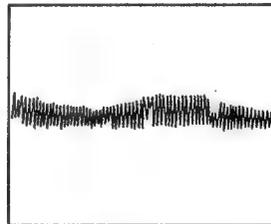

Fig. 2 Null point

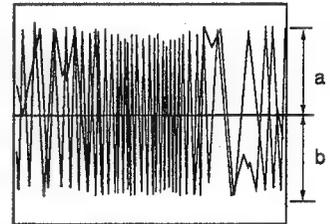

Fig. 3 Maximize the TRKG error a=b

Adjustment Procedure

<Coarse Grating Adjustment>

1. Play the LD test disc.
2. Search around for frame #6,500.
3. Open the TRKG servo.
(See the table of operation in the test mode.)
4. Connect an oscilloscope to CN401-9 and observe the waveform.
5. Coarse adjust the TRKG error waveform becomes maximum by turning the TRKG and tangential direction angle adjustment screw for the pickup adjustment. (This is indispensable in order to minimize dispersion in the subsequent adjustments.)
6. Insert the small screwdriver into the grating adjustment hole. Turning the grating will allow you to vary the amplitude of the TRKG error waveform. Find the position where the waveform amplitude becomes minimum with a smooth envelope. (Fig. 2) (This indicates that the 3-way split laser beams are directed onto the track. This is called the null point.)

7. Slowly turn the grating counterclockwise from the on track position until the waveform amplitude becomes maximum. (Fig. 3)
8. Close the TRKG servo and check that a normal picture is displayed on the TV screen.

<TRKG Balance Adjustment>

1. Align the oscilloscope GND so that it comes to the center of the oscilloscope screen.
2. Adjust VR602 so that the positive and negative amplitude of the TRKG error waveform become equal. (Fig. 3)

Note: If adjustment of VR602 fails to disturb the tracking, perform the adjustment after set VR607 to the mechanical center.
