

Technical Service Manual

COLOR TELEVISION RECEIVER

20K-20 CHASSIS MANUAL

MODEL NO.: MTV-208

Samsung

SAFETY CAUTION:

Before servicing this chassis, it is important that the service technician read and follow the "Safety Precaution" and "Product Safety Notice" in this Service Manual.

*For continued X-radiation protection, replace picture tube with original type.

WARNING - SHOCK HAZARD - Use isolation transformer when servicing.

Specifications

| | |
|---------------------------|---------------------------------|
| POWER REQUIREMENT | 120V/60HZ |
| POWER CONSUMPTION | 77 WATTS NOMINAL |
| VIDEO SIGNAL SYSTEM | N.T.S.C. COLOR TV SIGNAL |
| TUNING RANGES | UHF CH. 14-83, VHF CH. 2-13 |
| RESOLUTION | MONOCHROME; MORE THAN 250 LINES |
| PICTURE TUBE | TYPE 510UXB22 |
| ANTENNA INPUT IMPEDANCE | 300 OHM BALANCED TYPE FOR UHF |
| INTERMEDIATE FREQUENCY | 75 OHM UNBALANCED TYPE FOR VHF |
| X-RADIATION PROTECTOR | PICTURE 45.75MHz SOUND 41.25MHz |
| RF AGC | COLOR SUB CARRIER 42.17MHz |
| AUDIO POWER OUTPUT RATING | FAIL SAFE CIRCUIT |
| SPEAKER | REVERSE AGC |
| | 0.7W AT 10% DISTORTION |
| | 102MMx102MM ROUND 8 OHMS |

* Design and specifications are subject to change without notice.

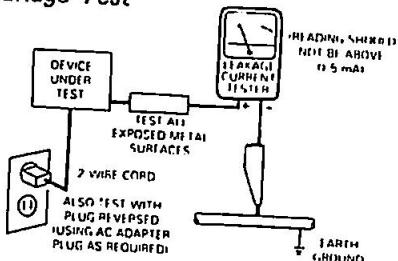

SAFETY PRECAUTIONS

1. Before returning an instrument to the customer, always make a safety check of the entire instrument, including, but not limited to, the following items:
 - a. Be sure that no built-in protective devices are defective and/or have been defeated during servicing. (1) Protective shields are provided on this chassis to protect both the technician and the customer. Correctly replace all missing protective shields, including any removed for servicing convenience. (2) When reinstalling the chassis and/or other assembly in the cabinet, be sure to put back in place all protective devices, including, but not limited to, nonmetallic control knobs, insulating fishpapers, adjustment and compartment covers/shields, and isolation resistor/capacitor networks. Do not operate this instrument or permit it to be operated without all protective devices correctly installed and functioning.
 - b. Be sure that there are no cabinet openings through which an adult or child might be able to insert their fingers and contact a hazardous voltage. Such openings include, but are not limited to, (1) spacing between the picture tube and the cabinet mask, (2) excessively wide cabinet ventilation slots, and (3) an improperly fitted and/or incorrectly secured cabinet back cover.
 - c. **Antenna Cold Check** — With the instrument AC plug removed from any AC source, connect an electrical jumper across the two AC plug prongs. Place the instrument AC switch in the on position. Connect one lead of an ohmmeter to the AC plug prongs tied together and touch the other ohmmeter lead in turn to each tuner antenna input exposed terminal screw and, if applicable, to the coaxial connector. If the measured resistance is less than 1.0 megohm or greater than 5.2 megohm, an abnormality exists that must be corrected before the instrument is returned to the customer. Repeat this test with the instrument AC switch in the off position.

ANY MEASUREMENTS NOT WITHIN THE LIMITS SPECIFIED HEREIN INDICATE A POTENTIAL SHOCK HAZARD THAT MUST BE ELIMINATED BEFORE RETURNING THE INSTRUMENT TO THE CUSTOMER.

Figure 1.

AC Leakage Test

- d. **X-Radiation and High Voltage Limits** — Because the picture tube is the primary potential source of X radiation in solid-state TV receivers, it is specially constructed to prohibit X-radiation emissions. For continued X-radiation protection, the replacement picture tube must be the same type as the original. Also, because the picture tube shields and mounting hardware perform an X-radiation protection function, they must be correctly in place. High voltage must be measured each time servicing is performed that involves B+, horizontal deflection or high voltage. Correct operation of the X-radiation protection circuits also must be reconfirmed each time they are serviced. (X-radiation protection circuits also may be called "horizontal disable" or "hold-down.") Read and apply the high voltage limits and, if the chassis is so equipped, the X-radiation protection circuit specifications given on instrument labels and in the *Product Safety & X-radiation Warning* note on the service data chassis schematic. High voltage is maintained within specified limits by close-tolerance safety-related components/adjustments in the

- high-voltage circuit. If high voltage exceeds specified limits, check each component specified on the chassis schematic and take corrective action.
2. Read and comply with all caution and safety-related notes on or inside the receiver cabinet, on the receiver chassis, or on the picture tube.
3. **Design Alteration Warning** — Do not alter or add to the mechanical or electrical design of this TV receiver. Design alterations and additions, including, but not limited to, circuit modifications and the addition of items such as auxiliary audio and/or video output connections, might alter the safety characteristics of this receiver and create a hazard to the user. Any design alterations or additions will void the manufacturer's warranty and will make you, the servicer responsible for personal injury or property damage resulting therefrom.
4. **Picture Tube Implosion Protection Warning** — The picture tube in this receiver employs integral implosion protection. For continued implosion protection, replace the picture tube only with one of the same type number. Do not remove, install, or otherwise handle the picture tube in any manner without first putting on shatterproof goggles equipped with side shields. People not so equipped must be kept safely away while picture tubes are handled. Keep the picture tube away from your body. Do not handle the picture tube by its neck. Some "in-line" picture tubes are equipped with a permanently attached deflection yoke; because of potential hazard, do not try to remove such "permanently attached" yokes from the picture tube.
5. **Hot Chassis Warning** — a. Some TV receiver chassis are electrically connected directly to one conductor of the AC power cord and may be safely serviced without an isolation transformer only if the AC power plug is inserted so that the chassis is connected to the ground side of the AC power source. To confirm that the AC power plug is inserted correctly, with an AC voltmeter measure between the chassis and a known earth ground. If a voltage reading in excess of 1.0V is obtained, remove and reinsert the AC power plug in the opposite polarity and again measure the voltage potential between the chassis and a known earth ground. b. Some TV receiver chassis normally have 85V AC (RMS) between chassis and earth ground regardless of the AC plug polarity. These chassis can be safely serviced only with an isolation transformer inserted in the power line between the receiver and the AC power source, for both personnel and test equipment protection. c. Some TV receiver chassis have a secondary ground system in addition to the main chassis ground. This secondary ground system is not isolated from the AC power line. The two ground systems are electrically separated by insulating material that must not be defeated or altered.
6. Observe original lead dress. Take extra care to assure correct lead dress in the following areas: a. near sharp edges. b. near thermally hot parts — be sure that leads and components do not touch thermally hot parts. c. the AC supply. d. high voltage, and e. antenna wiring. Always inspect in all areas for pinched, out-of-place, or frayed wiring. Do not change spacing between components, and between components and the printed-circuit board. Check AC power cord for damage.
7. Components, parts, and/or wiring that appear to have overheated, or are otherwise damaged should be replaced with components, parts, or wiring that meet original specifications. Additionally, determine the cause of overheating and/or damage and, if necessary, take corrective action to remove any potential safety hazard.
8. **Product Safety Notice** — Some electrical and mechanical parts have special safety-related characteristics which are often not evident from visual inspection, nor can the protection they give necessarily be obtained by replacing them with components rated for higher voltage, wattage, etc. Parts that have special safety characteristics are identified by shading on schematics and parts lists. Use of a substitute replacement that does not have the same safety characteristics as the recommended replacement part might create shock, fire, and/or other hazards. Products Safety is under review continuously and new instructions are issued whenever appropriate.

SERVICE NOTES

1. When replacing parts or circuit boards, crimp the lead wires to terminals before soldering.
2. When replacing a high wattage resistor (oxide metal film resistor) in circuit board, keep the resistor 10 mm (½ in.) away from circuit board.
3. Keep wires away from high voltage or high temperature components.
4. If any Fuse in this TV receiver opens, replace it only with the Fuse specified in the chassis parts list.

GENERAL ALIGNMENT INSTRUCTIONS

THIS RECEIVER IS TRANSISTORIZED AND SPECIAL CARE MUST BE TAKEN WHEN SERVICING. READ THE FOLLOWING NOTES BEFORE ATTEMPTING ALIGNMENT.

1. Alignment requires an exacting procedure and should be undertaken only when necessary.
2. The test equipment specified or its equivalent is required to perform the alignment properly. Use of equipment which does not meet these requirements may result in improper alignment.
3. Correct matching of the equipment is essential. Failure to use proper matching could result in responses which may result in improper operation of the receiver.
4. Use of excessive signal from a sweep generator can cause overloading of receiver circuit. Overloading should be avoided to obtain a true response curve. Insertion of markers from the marker generator should not cause distortion of the response.
5. The receiver should be connected to an AC power source with voltage and frequency as specified in the nameplate of the backcover.
6. Do not attempt to connect or disconnect any wire while the receiver is in operation. Make sure the power cord is disconnected, before replacing any parts in the receiver.
7. Isolation transformer must be used to prevent shock hazard.

INSTALLATION AND SERVICE ADJUSTMENT

(Refer to Figure 2)

GENERAL

In the majority of cases, a color television receiver will need only slight touch-up adjustment upon installation. Check the basic characteristics such as height, vertical sync., horizontal sync. and focus. Observe the picture for good black and white details without objectionable color shading. If color shading is evident, demagnetize the receiver. If color shading still persists, perform purity and convergence adjustments. This should be all that is necessary to achieve optimum receiver performance.

VERTICAL OSCILLATOR ADJUSTMENT

If the picture moves up or down on the screen, adjust the VERTICAL HOLD control (VR301) at the rear of the receiver.

HORIZONTAL OSCILLATOR ADJUSTMENT

If there is an indication of unstable horizontal sync, adjust the HORIZONTAL HOLD control (VR401) to the center of the pull-in range.

VERTICAL SIZE ADJUSTMENT

The V-SIZE controls (VR302) changes the size of the picture or pattern. Make final adjustment to overscan the CRT about 10% vertically.

FOCUS ADJUSTMENT

Adjust the FOCUS control (T444) for well defined scanning lines on the picture screen.

HIGH VOLTAGE CHECK

CAUTION: There is no HIGH VOLTAGE ADJUSTMENT on this chassis. The B⁺ power supply (+125V) must be checked to insure the correct high voltage.

1. Connect an accurate high voltage meter to the second anode of the picture tube.
2. Turn on the receiver. Set the AFT/AUTO COLOR switch to the OFF position. Set the BRIGHTNESS and CONTRAST controls to minimum (zero beam current).
3. High voltage must be about 27KV.
4. Rotate the BRIGHTNESS control to both extremes to be sure the high voltage does not exceed the 30kV limit under any conditions.

FAIL SAFE CIRCUIT CHECK (FS)

The FS circuit check is mandatory for the final check after servicing. Follow the steps below.

1. Turn the power switch on and adjust customer controls for normal operation.
2. Temporarily short Pin X and Pin R on Main Board with a jumper wire. Raster and sound will disappear.
3. The receiver must remain in this state even after removing the jumper wire. This shows that the FS circuit is functioning properly.
4. To obtain a picture again, temporarily turn the receiver off and allow the FS circuit more than 20 seconds to reset. Then turn the power switch on to produce a normal picture.

AGC ADJUSTMENT

1. Tune in the strongest station in your area.
2. Push 'on' the AFT/AUTO COLOR switch SW501 located at the front of the receiver.
3. Turn the AGC DELAY control (VR123) fully counter-clockwise, then turn it clockwise until snow noise just disappears from the screen.

SUB-BRIGHTNESS ADJUSTMENT

1. Tune in a color program.
2. Set the CONTRAST Control to minimum and the BRIGHTNESS Control to the maximum position.
3. Set the COLOR and TINT controls to center.
4. Set the SUB-BRIGHT control (VR203) to center and leave the receiver for five minutes in this state.
5. Connect VTVM between Pin Z and Pin Y, and then adjust the sub bright control (VR203) on Main Board for + 0.2 volt reading.
6. Check for proper picture variation by rotating the CONTRAST and BRIGHTNESS controls to both extremes.
7. If the picture does not appear dark with the CONTRAST and BRIGHTNESS controls turned to minimum, or not bright enough with the controls turned to maximum, adjust the SUB-BRIGHT control for an acceptable picture.

AFT (Automatic Fine Tuning) FIELD ALIGNMENT

1. Place AFT/AUTO COLOR Switch in OFF position. Tune the set to an active channel and adjust fine tuning for best picture.
2. Place AFT Switch in ON position, and adjust Trans. (L171) on MAIN Board for best picture. Picture quality should be the same as that obtained in Step 1.
3. Check the AFT action by turning the fine tuning clockwise and counterclockwise.

AUTOMATIC DEGAUSSING

A degaussing coil is mounted around the picture tube so that external degaussing after moving the receiver is normally unnecessary, providing the receiver is properly degaussed upon installation. The degaussing coil operates for about 1 second after the power to the receiver is switched ON. If the set is moved or faced in a different direction, the power switch must be switched off at least 10 minutes in order that the automatic degaussing circuit operates properly.

Should the chassis or parts of the cabinet become magnetized to cause poor color purity, use an external degaussing coil. Slowly move the degaussing coil around the faceplate of the picture tube, the sides and front of the receiver and slowly withdraw the coil to a distance of about 6' (2 m) before disconnecting it from AC source. If color shading still persists, perform the COLOR PURITY ADJUSTMENT and CONVERGENCE ADJUSTMENT procedures, as mentioned later.

CRT GRAY SCALE ADJUSTMENT

1. Set the COLOR Control to minimum.
2. Adjust the BRIGHTNESS and CONTRAST Controls to obtain low light area.
3. Adjust RED, GREEN and BLUE BIAG Controls, (VR504, VR503, VR502) to obtain gray raster of low brightness.
4. Adjust the BRIGHTNESS and CONTRAST Controls to maximum.
5. Adjust the BLUE DRIVE (VR506) and RED DRIVE Controls (VR505) to obtain proper white-balanced picture in high light areas.
6. Repeat steps 2 through 5 for correct gray scale.

PARTS LOCATION DIAGRAM

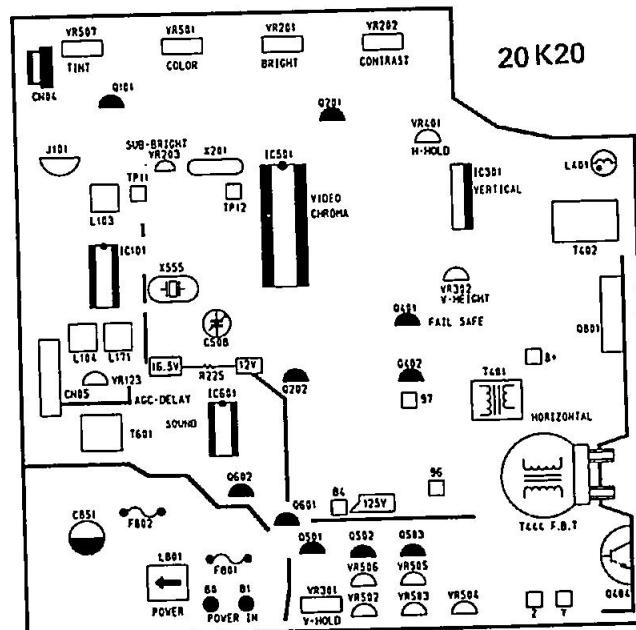

Figure 2.

COLOR PURITY ADJUSTMENT

1. Operate the receiver for 20 minute to warm up the CRT with Bright control maximum.
2. Degauss the receiver fully by using an external degaussing coil.
3. Roughly adjust convergence.
4. Receive a black and white signal.
5. Turn red and blue Low Light controls (VR504, VR502) fully counterclockwise to obtain a green field. Adjust Drive controls when green field is not obtained.
6. Loosen the deflection yoke clamp screw and move the deflection yoke as close to the purity magnet as possible.
7. Loosen purity, magnet clamp and adjust the purity magnet to set the vertical green raster precisely at the center of the screen. The tighten the clamp.
8. Slowly move the deflection yoke forward and adjust for best overall green screen.
9. Tighten the deflection yoke clamp screw.
10. Produce the blue and red raster by Low Light controls and observe that good purity is obtained on the respective field.

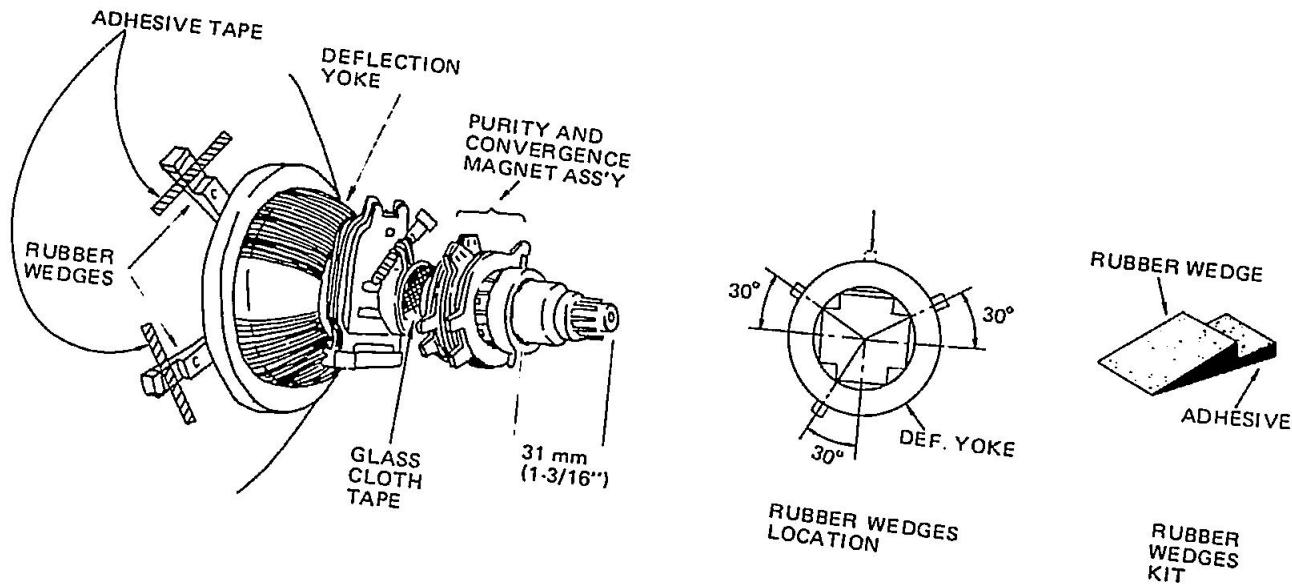

Figure 3. TUBE ASSEMBLY

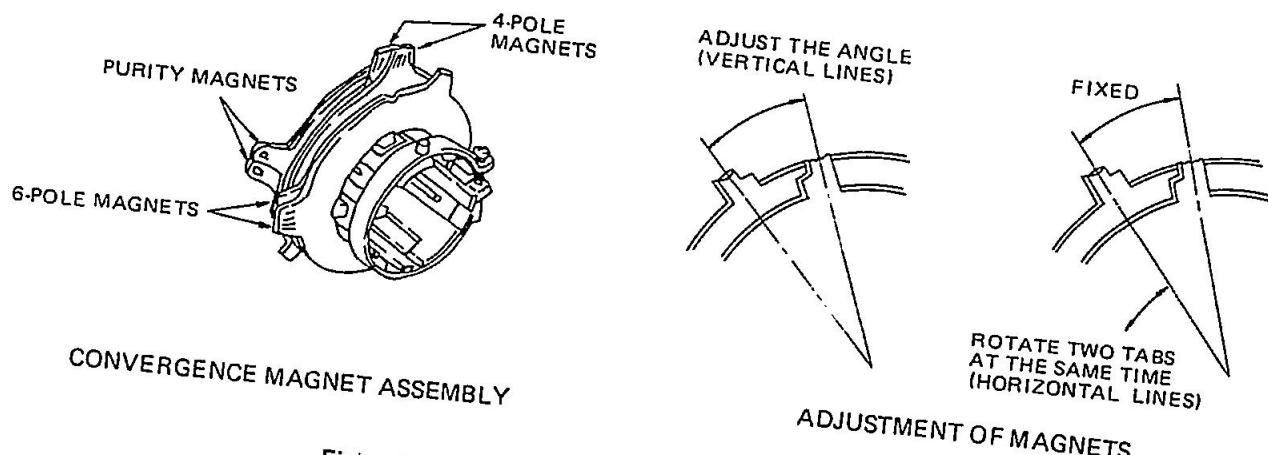

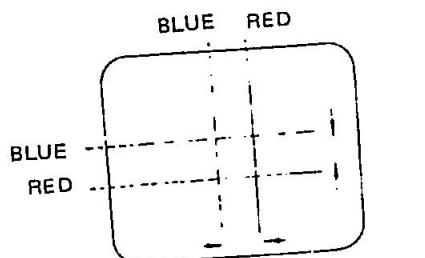

Figure 4. PURITY AND CONVERGENCE MAGNETS

CONVERGENCE ADJUSTMENTS

NOTE : Before attempting any convergence adjustments, the receiver should be operated for at least fifteen minutes.

CENTER CONVERGENCE ADJUSTMENTS

1. Receive crosshatch pattern with a color bar signal generator.
2. Adjust the BRIGHTNESS and CONTRAST Controls for well defined pattern.
3. Adjust the two tabs of the 4-Pole Magnets to change the angle between them and superimpose red and blue vertical lines in the center area of the picture screen.

4. Turn both tabs at the same time without changing position between them, to superimpose red and blue horizontal lines at the center of the screen.
5. Adjust two tabs of 6-Pole Magnets to superimpose red/blue line with green. Adjusting the angle affects the horizontal lines.
6. Repeat adjustments 3, 4, 5, observing red, green and blue movement, because 4-Pole Magnets and 6-Pole Magnets interact.

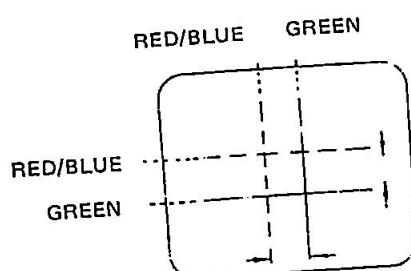

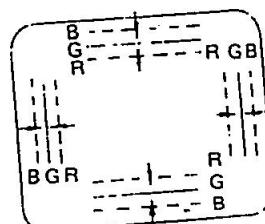

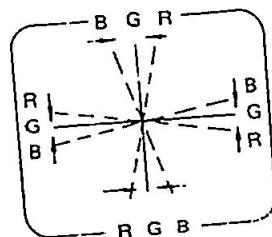

Figure 5. CENTER CONVERGENCE ADJUSTMENT

CIRCUMFERENCE CONVERGENCE ADJUSTMENT

1. Loosen the clamp screw of deflection yoke to allow the yoke to tilt.
2. Place a wedge temporarily. (Temporary Mounting). (do not remove cover paper on adhesive part of a new wedge).
3. Tilt front of the deflection yoke up or down to obtain better convergence in circumference. Push the mounted wedge into the space between picture tube and the yoke to hold the yoke temporarily in place.
4. Place other wedge at bottom and remove the cover paper to stick.
5. Tilt front of the yoke right or left to obtain better convergence in circumference.

6. Keep the yoke positioned and put another wedge in either upper space. Remove cover paper and stick the wedge on picture tube to secure the yoke.
7. Detach the temporarily mounted wedge and put it in another upper space. Stick it on picture tube to secure the yoke.
8. After inserting three wedges, recheck overall convergence. Tighten the screw firmly to hold the yoke tightly in place.
9. Place 3 adhesive tapes over wedges, as shown in Figure 3.

INCLINE THE YOKE UP (OR DOWN)

INCLINE THE YOKE RIGHT (OR LEFT)

Figure 6. CIRCUMFERENCE CONVERGENCE ADJUSTMENT

TEST EQUIPMENT

Allow minimum of 10 minutes warm-up period for test equipment.

- Sweep/Marker Generator-Capable of furnishing markers at 42.75MHz, 45.75MHz.
- Oscilloscope-Wideband.
- External Bias-Battery or well regulated, isolated AC operated variable DC Bias supply (0-20V)
- Alignment Tool.

PICTURE I-F SWEEP ALIGNMENT

Refer to figure 7 for alignment points and test equipment connections.

1. Connect output of sweep/marker generator to test point (TP) on the tuner. (See Fig. 7)

2. Connect the oscilloscope with direct probe to TP12 on the PWB Main Board through 100K ohm resistor.
3. Apply approximately +5 – +8V to TP-11 and +16.5V bias to the left side of R225 on the PWB Main Board.

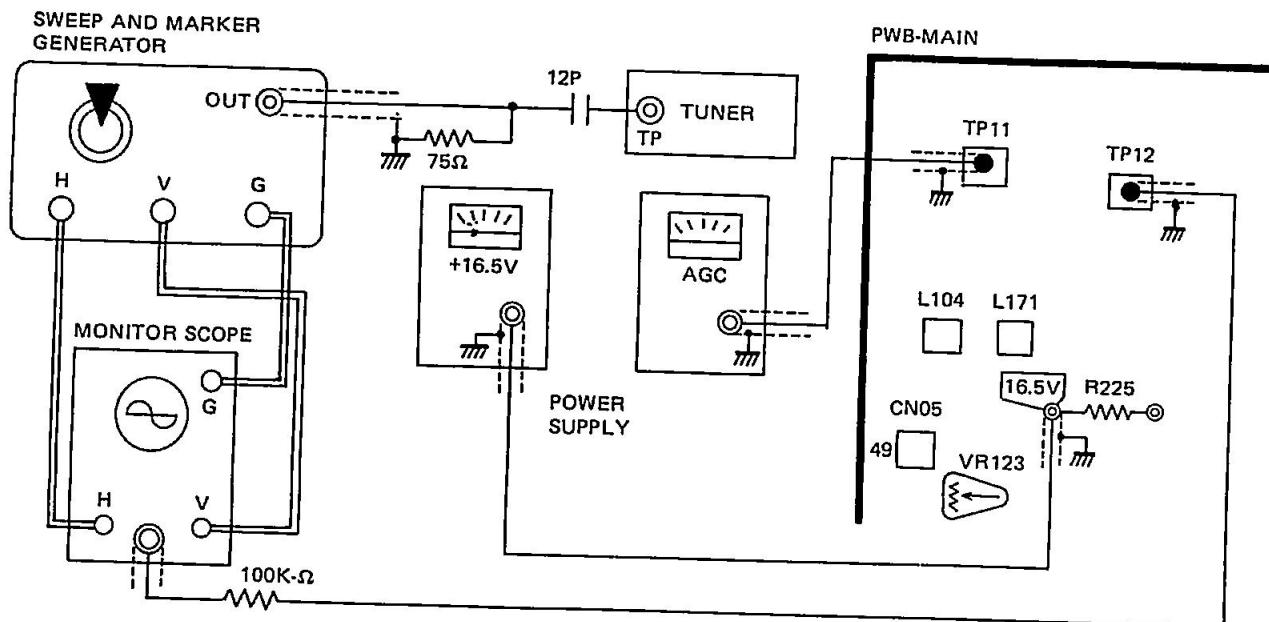

Figure 7. Picture I-F Sweep Alignment

I-F (45.75MHz) ADJUSTMENT

1. Adjust the attenuator on the Sweep/Marker Generator and I-F AGC Bias (TP11) to achieve 1Vp-p on oscilloscope.
2. Adjust L104 for maximum amplitude at 45.75MHz. (See Fig. 8.)

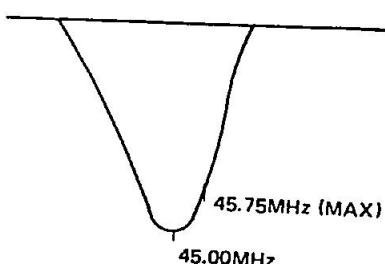

Figure 8 . I-F (45.75MHz) Response Curve.

I-F OVERALL ADJUSTMENT

1. Retain initial connections for I-F overall adjustment.
2. Adjust the core of tuner. (See Fig. 9)

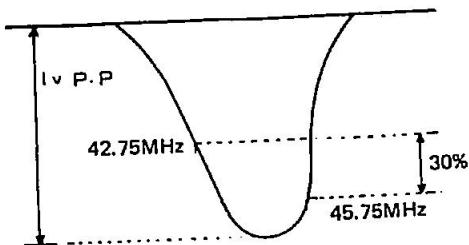

Figure 9. I-F OVERALL RESPONSE CURVE.

AFT ADJUSTMENT

1. Remove detector probe from TP12.
2. Connect detector probe to pin 49.
3. Adjust coil L171 for exact marker position.
(See Fig. 10)

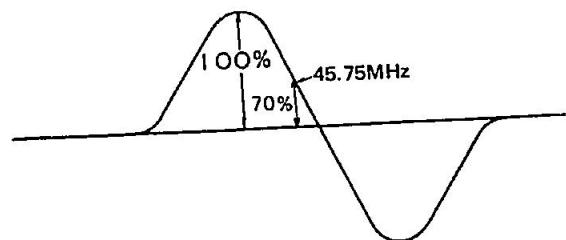

Figure 10. AFT RESPONSE CURVE.

COLOR SYNC ADJUSTMENT

1. Tune in a color program and warm up for five minutes.
2. Connect a capacitor (0.47 mfd) to both sides of C502.
3. Set the controls as follows;
CONTRAST : Minimum
TINT : Fully counterclockwise
COLOR : Maximum
4. Adjust the color sync. variable capacitor (C508) on the Main Board so that the color bar pattern stands still or drifts slowly across the picture screen.

5. Remove the capacitor (0.47 mfd).
6. Check that the color sync. is stable with channel changing and power on-off operation. If the color is slow to appear or the color is out of sync, retouch the color sync. variable capacitor (C508) for proper color display.

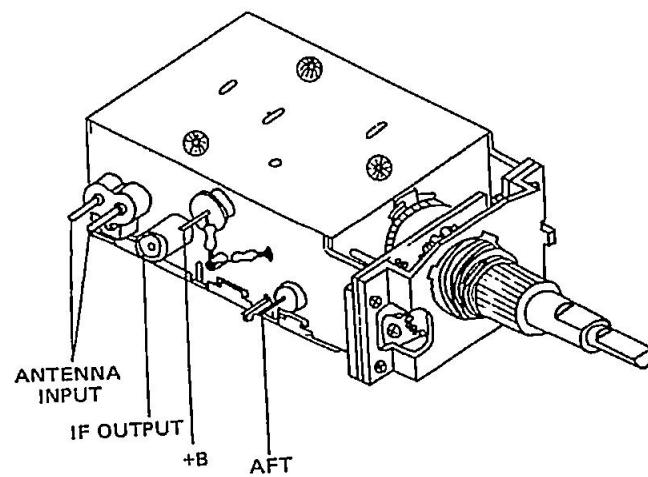

Figure 12. UHF TUNER VIEW

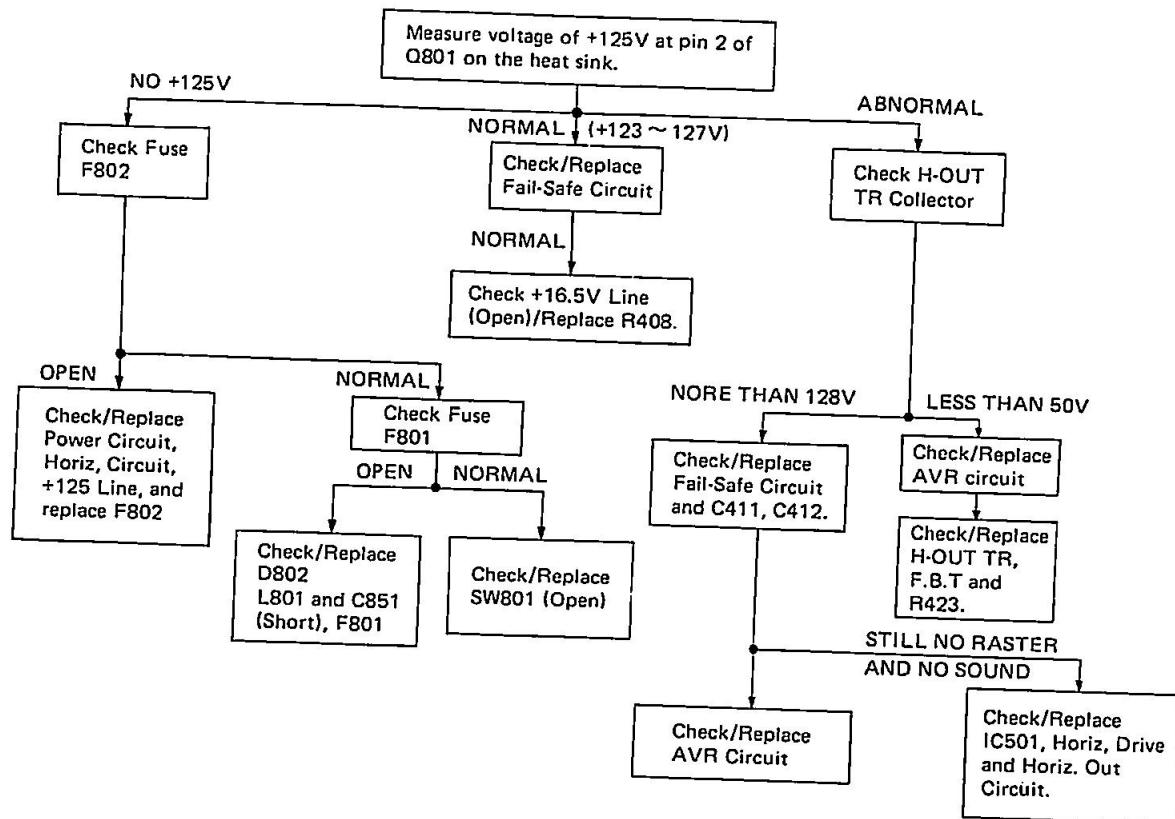

TROUBLESHOOTING CHARTS

The following charts are devoted to troubleshooting which, if followed carefully, will assist you in tracking down a fault to the correct stage.

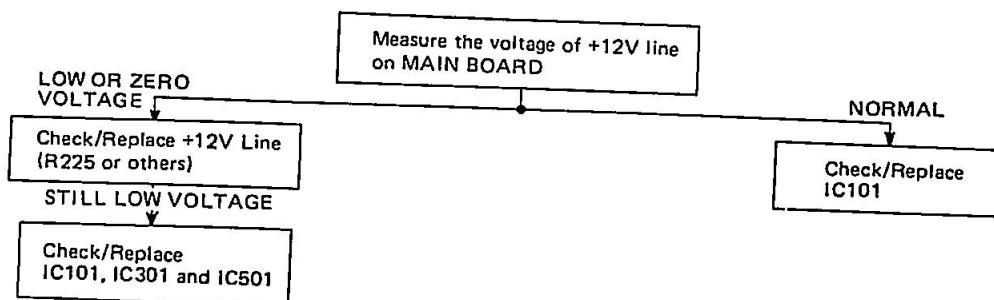

In order to utilize the charts (fault trees), first establish the complaint, i.e. —No Raster, No Sound.

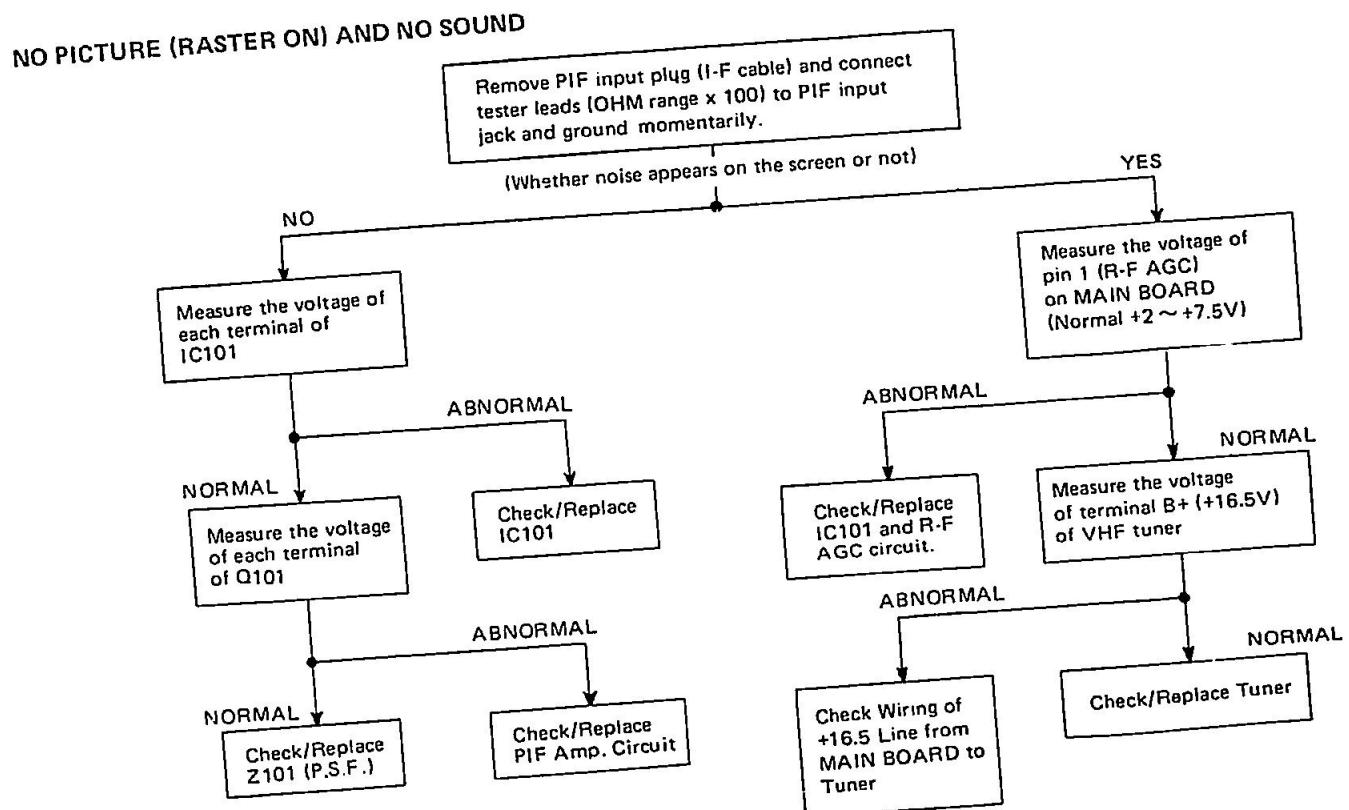

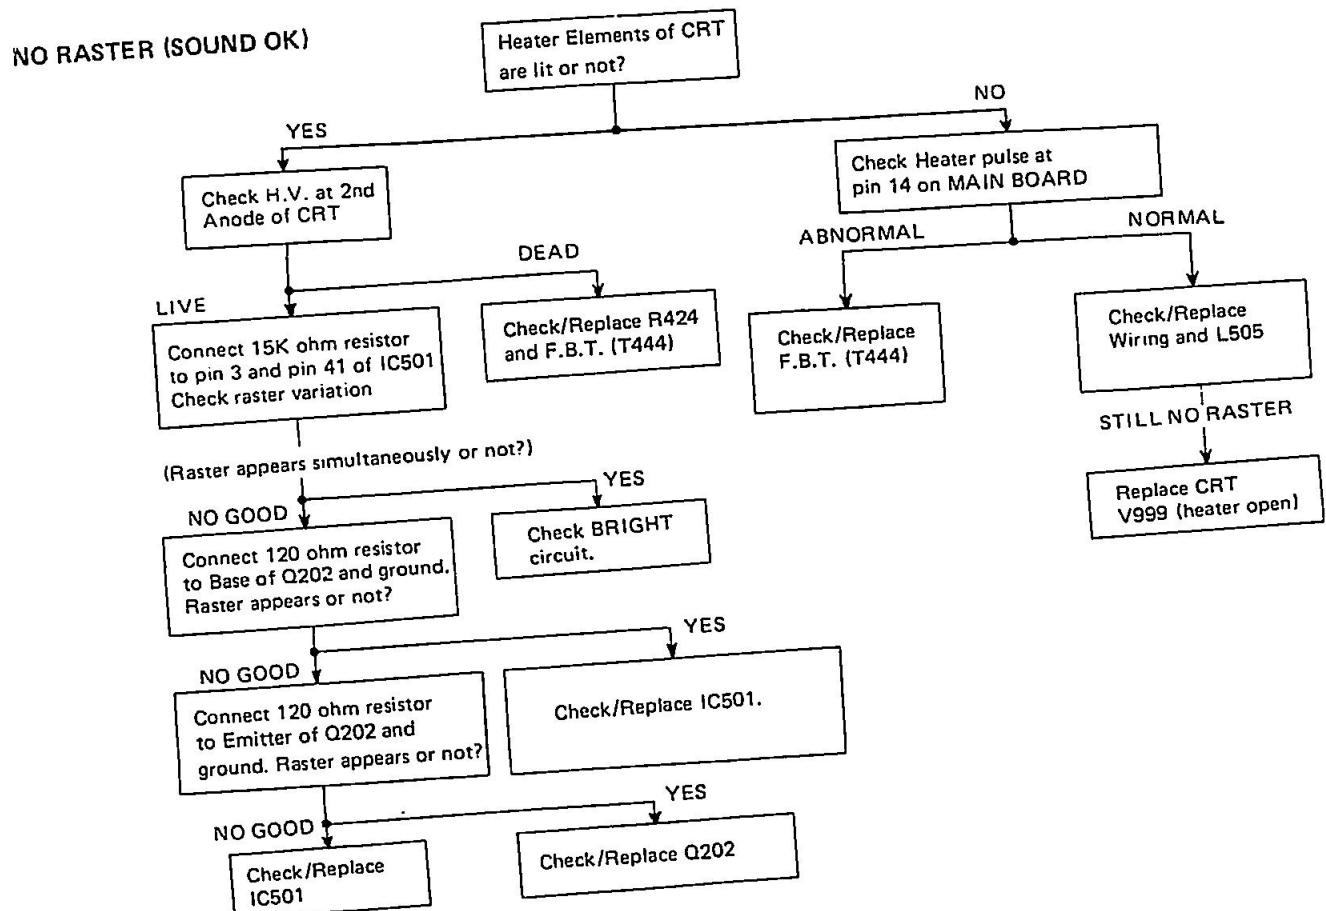

Locate the chart applicable and then progress through the various alternatives until a final block indicates the offending components or stage.

NO RASTER AND NO SOUND

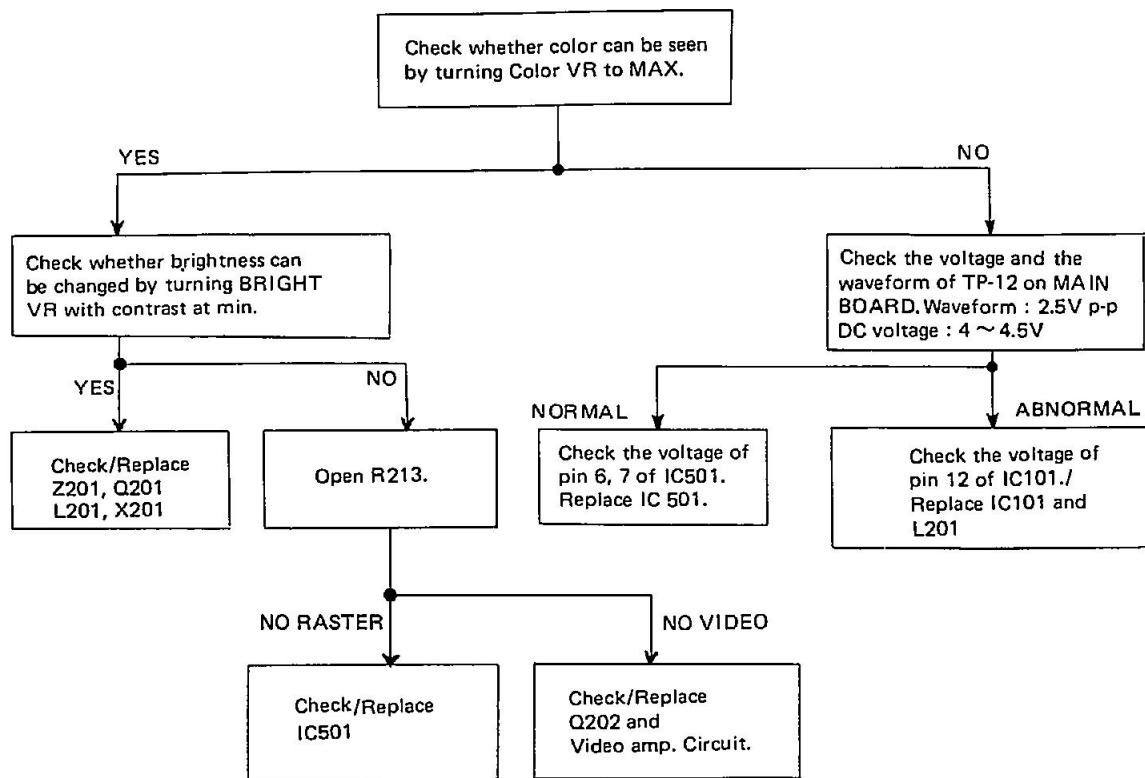

NO RASTER (SOUND NOISE OR WEAK SOUND)

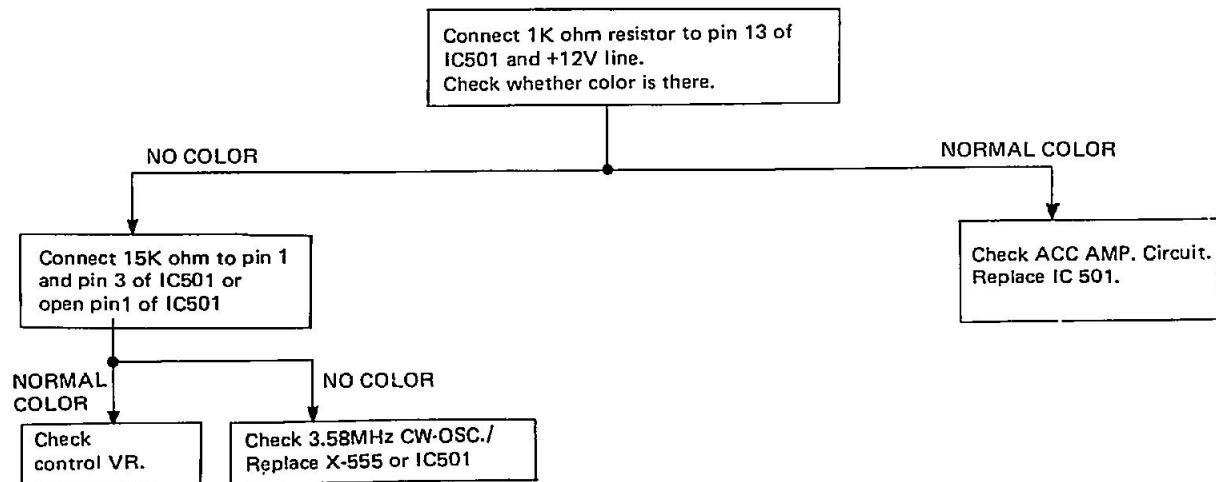

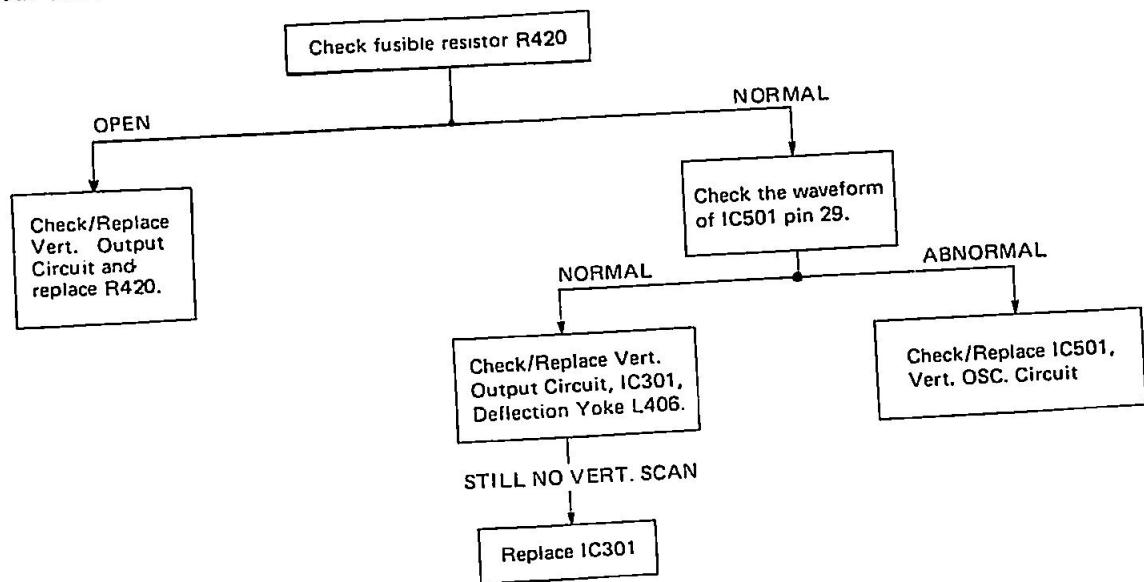

NO PICTURE (RASTER AND SOUND OK)

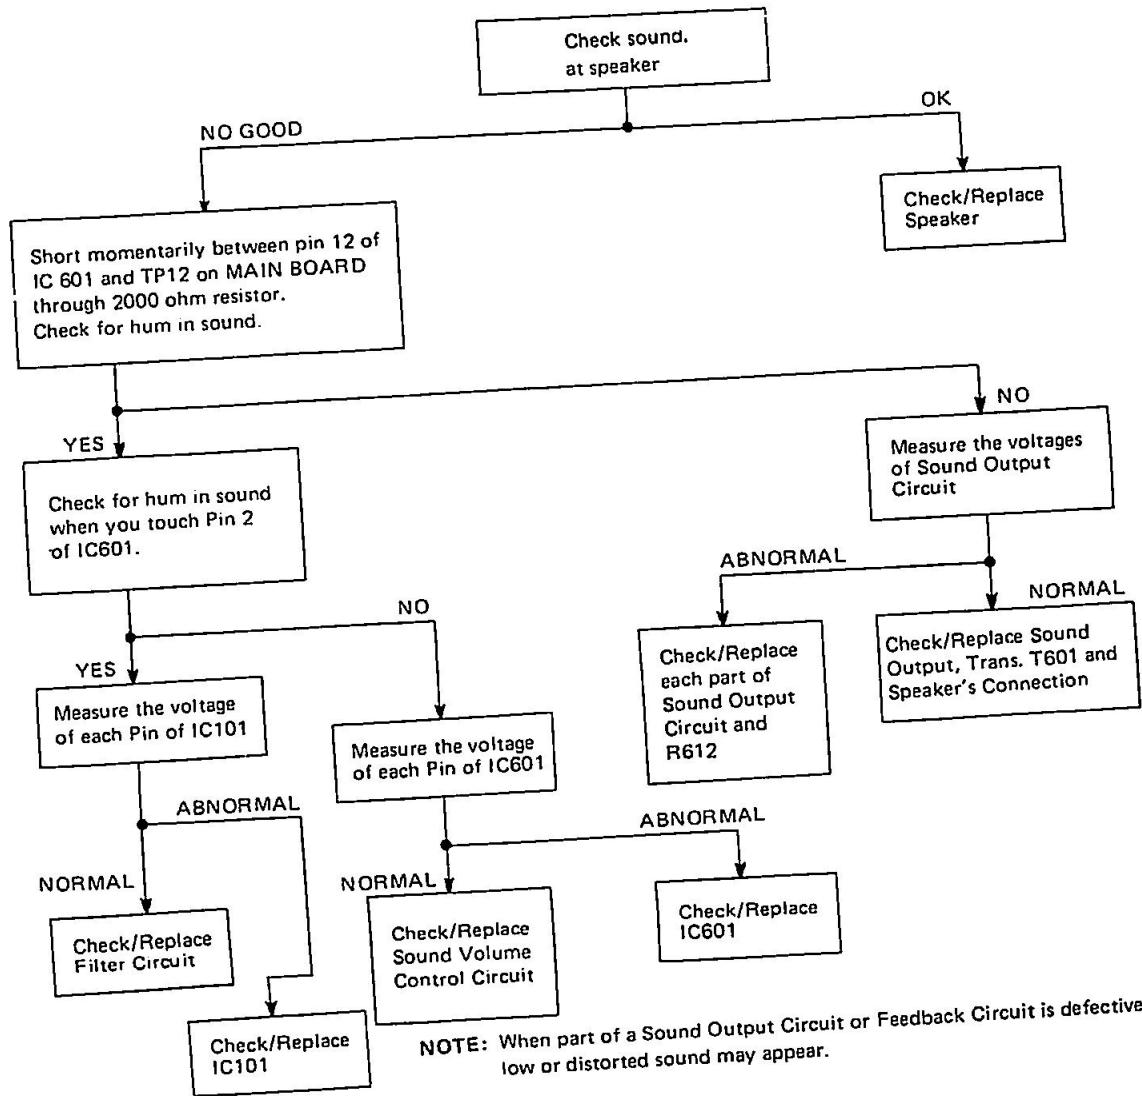

NO COLOR

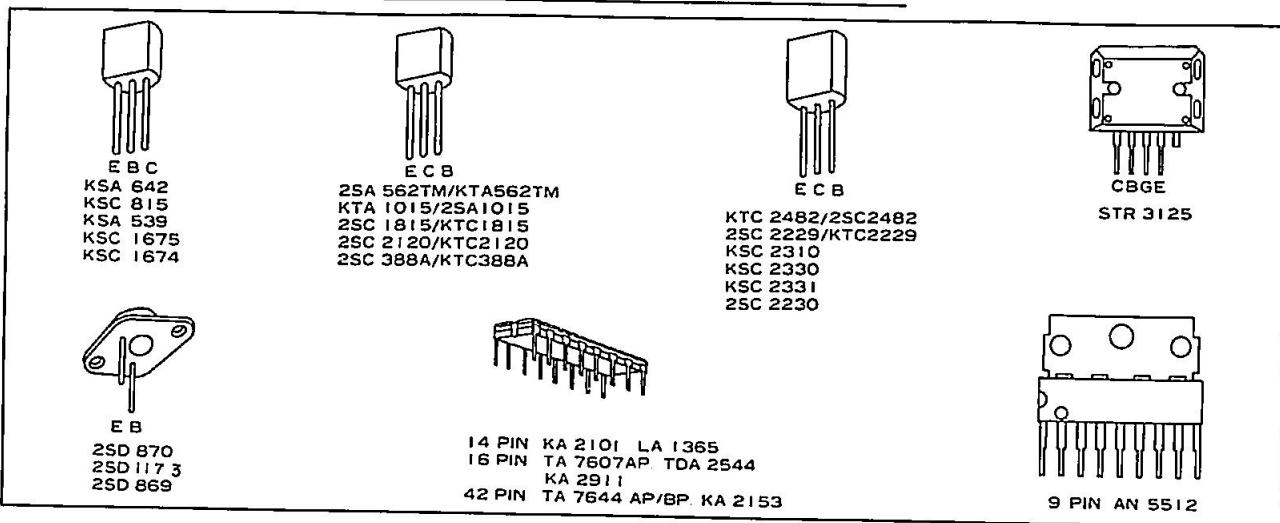

NO VERT. SCAN (ONE HORIZ. LINE RASTER)

NO SOUND

REPLACEMENT PARTS LIST

CHASSIS NO.: K-20

WARNING: BEFORE SERVICING THIS CHASSIS, READ THE "X-RAY RADIATION PRECAUTION", "SAFETY PRECAUTION" AND "PRODUCT SAFETY NOTICE" ON THIS MANUAL.

CAUTION: THE SHADED AREAS IN THE SCHEMATIC DIAGRAM AND THE PARTS LIST DESIGNATE COMPONENTS WHICH HAVE SPECIAL CHARACTERISTICS IMPORTANT FOR SAFETY AND SHOULD BE REPLACED ONLY WITH TYPES IDENTICAL TO THOSE IN THE ORIGINAL CIRCUIT OR SPECIFIED IN THE PARTS LIST. BEFORE REPLACING ANY OF THESE COMPONENTS, READ CAREFULLY THE PRODUCT SAFETY NOTICE. DO NOT DEGRADE THE SAFETY OF THE RECEIVER THROUGH IMPROPER SERVICING.

**SCHEMATIC DIAGRAM
CHASSIS NO.: 20 K 20**

WARNING: THIS RECEIVER CONTAINS SAFETY CRITICAL COMPONENTS. THE SHADED AREAS OF THE SCHEMATIC ARE SAFETY CRITICAL FOR CO¹ SAFETY CRITICAL COMPONENTS ONLY WITH MANUFACTURER'S RECOMM² PARTS LIST FOR EXACT REPLACEMENTS.

AVERTISSEMENT: CE RECEPTEUR EST EQUIPE DE COMPOSANTS CRITIQUES. TOUTES LES PIECES INDIQUEES DANS LES ZONES OMBREES DU SCHEMA SONT VITES A LA MAINTIENIR LE DEGRE DE SECURITE DE L'APPAREIL NE PERMETtant PAS LE FONCTIONNEMENT EST CRITIQUE POUR LA SECURITE QUE PAR DEFENSE, LE FABRICANT CONSULTER LA NOMENCLATURE DES PIECES POUR LA RECHARGE EXACTES!

WARNING : BEFORE SERVICING THIS CHASSIS READ THE "X-RAY RADIATION PRECAUTION" "SAFETY PRECAUTION" AND "PRODUCT SAFETY NOTICE" IN MANUAL.

CAUTION: The shaded area in the schematic diagram and parts list designate components which have special characteristics important for safety and should be replaced only with types identical to those in the original circuit or specified in the parts list. Before replacing any of these components, Read carefully the PRODUCT SAFETY NOTICE in this manual. Do not degrade the safety of the receiver through important servicing.

NOTE

1 Resistance is shown in ohm K=1,000 M=1,000
2 Unless otherwise noted in schematic, all capacitor

3 Unless otherwise noted in schematic, all inductor values are in microhenrys.

3 Unless otherwise noted in schematic all inductor
4 Voltages read with "V.T.V.M" (input impedance: 21

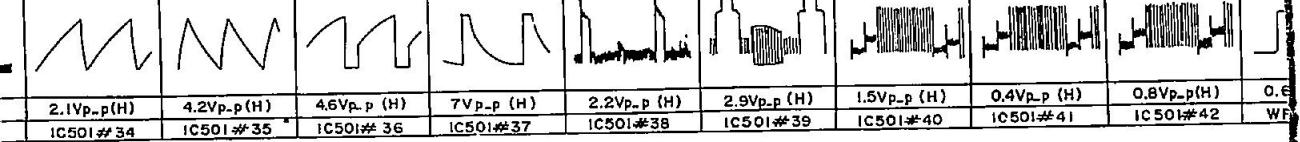

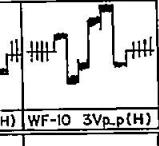

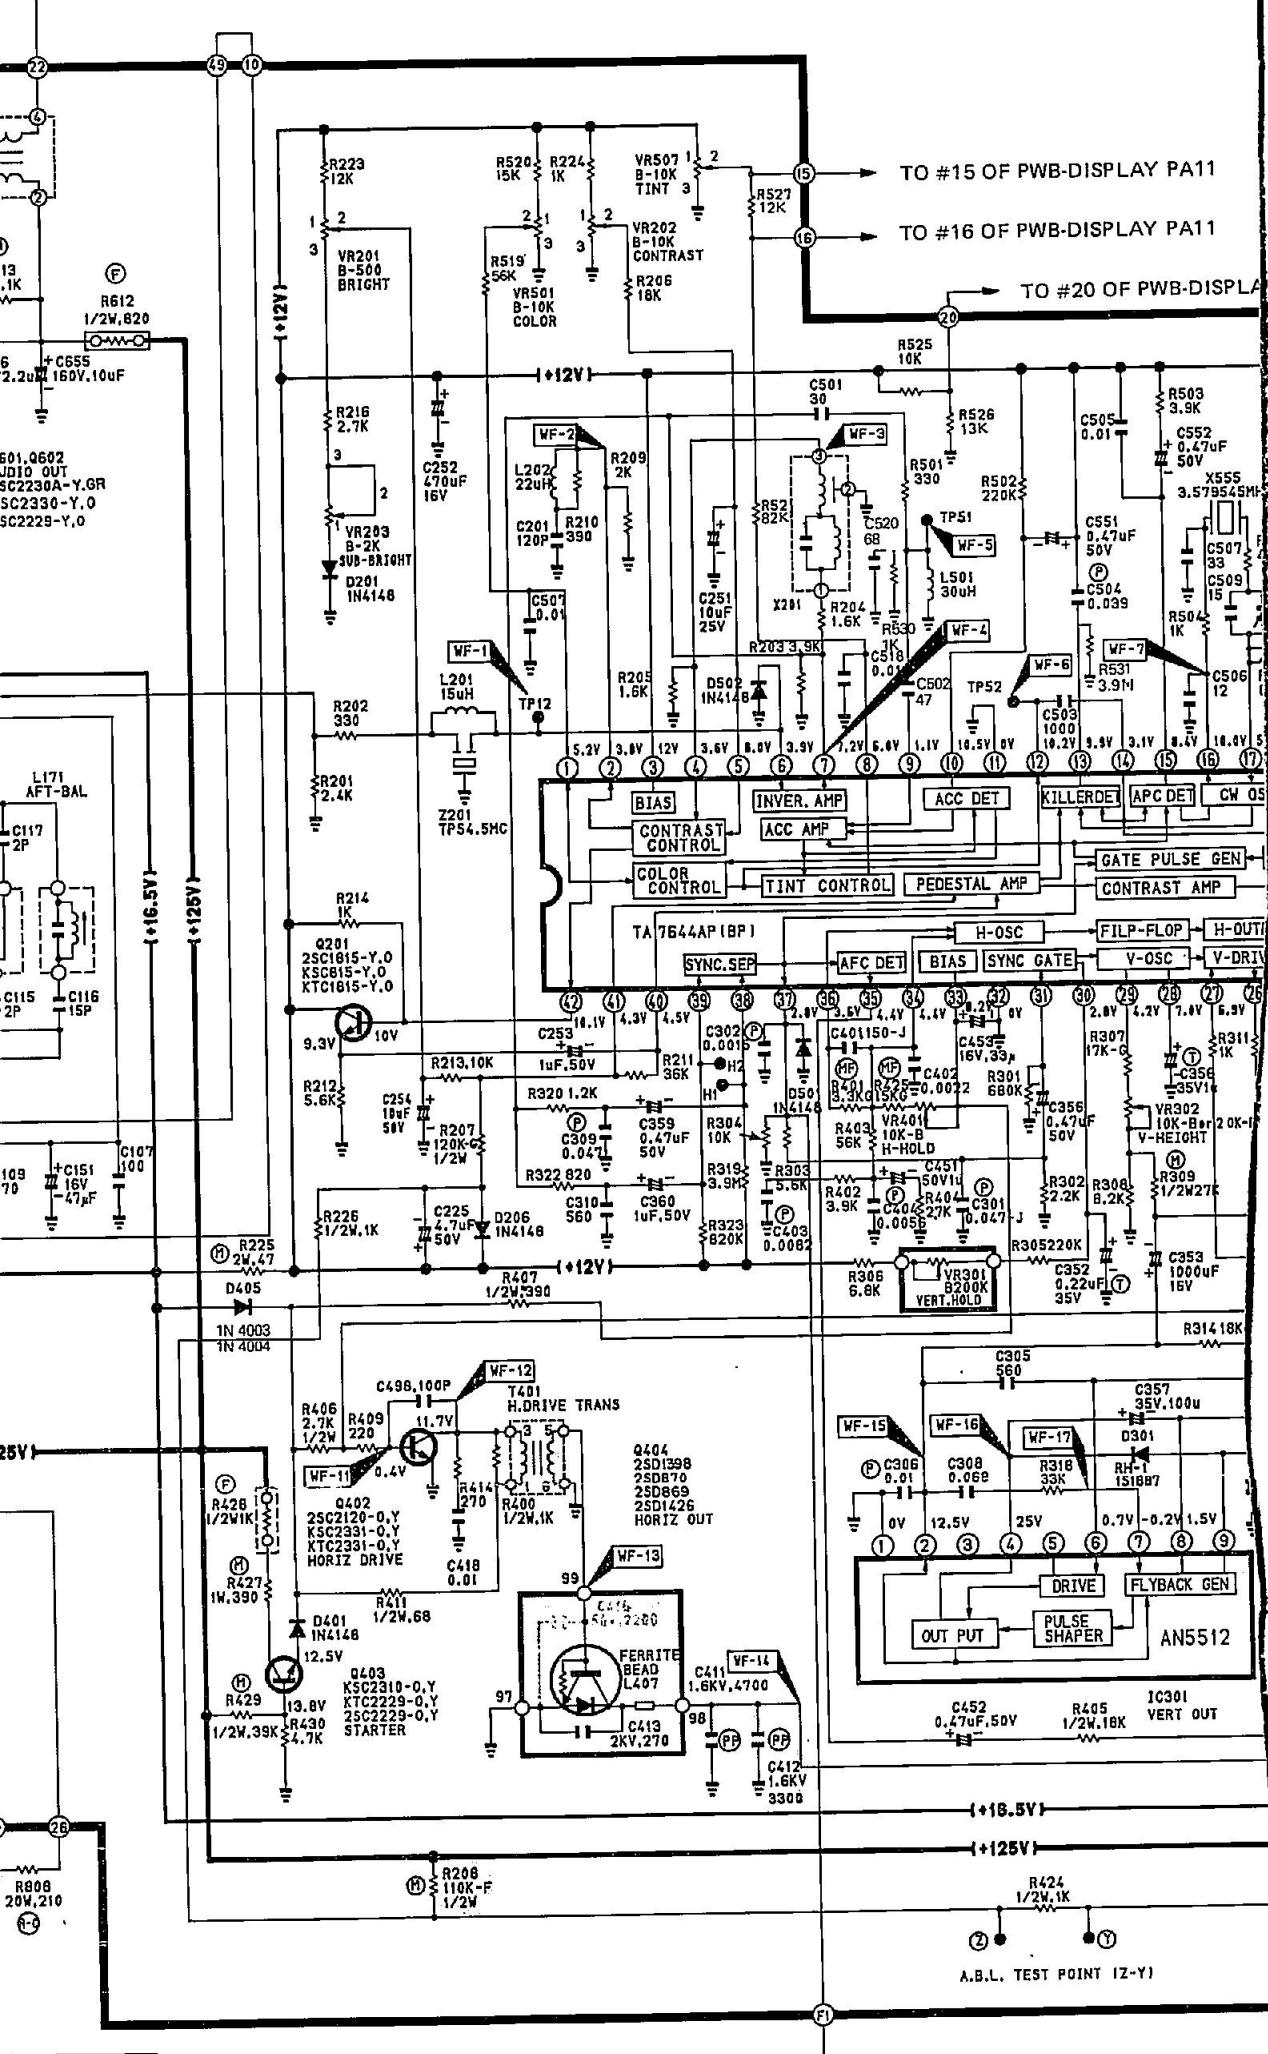

4 voltages read with V...V...V...V input impedances to chassis ground using color bar signal with all colors.

5 Waveforms in chrominance circuit are taken receiving
6 Waveforms in other circuits are taken using an air si

6 Waveforms in other circuits are taken using an air gap
7 Voltage reading shown are normal values and may
